Title Slide: Embedding Multilevel Factors in an Organization Field Context

W. Richard Scott
Stanford University
National Cancer Institute
U.S. Department of Health and Human Services
National Institutes of Health

Slide 2: Expanding Levels of Analysis

- organization structures as environments for individual behavior
- organization structures as foci of study
- organization sets
- organization populations
- organization fields

Slide 3: Expanding Scope of Variables

- economic exchanges (transactions)
- power and politics (intra- and interorganizational)
- relational networks and systems
- symbolic (cultural) systems
- knowledge, resources and capabilities in an evolutionary perspective

Slide 4: Organization Field (definitions)

Those organizations that, in the aggregate, constitute a recognized area of institutional life: key suppliers, resource and produce consumers, regulatory agencies, and other organizations that produce similar services or products.

- DiMaggio & Powell 1991

Slide 5: Organization Field (definitions)
The notion of field connotes the existence of a community organizations that partakes of a common meaning system and whose participants interact more frequently and fatefully with one another than with actors outside the field.

-Scott, 1994

**Slide 6: Components of Fields**

- Actors (individual and collective)
  - central, peripheral, and intermediate
  - established and emergent
- Institutional logics
  - cognitive and normative
  - background (e.g., assumptions) and foreground (e.g., policies)
- Governance structures
  - regulative and normative
  - organization-level and field-level

**Slide 7: Advantages of Field over Levels Conception**

- stresses centrality of organizations
- moves from generalized attributes to factors affecting specific actors in particular contexts (more customized)
- heuristic
- dynamic
- gives equal attention to structural and cultural factors
- accommodates tension between structures and actors
- views fields as areas of contestation as well as cooperation.

**Slide 8: Garbage Can Model of Decision-Making (March and Cohen 1972)**

Decisions are strongly affected by:
- who participates?
- what constitutes a ‘choice opportunity’?
- who decides what is a problem?
- who determines what is a possible or adequate solution?
Slide 9: Contextualizing Multi-level Factors

- laws & policies
  - affected by location of organization in field
- time
  - extent of field structuration
- interorganizational linkages
  - critical exchange partners
- community context
  - demographics
- organization
  - number/specialty of cancer care providers
