Informing Researcher-Practice Partnerships for Policy Implementation Science

“...to develop resources encouraging policy IS research uptake, specifically elevating practitioner and policy stakeholder perspectives to optimize research utility and application. Our proposal will enhance the nascent evidence base pertaining to policy IS, and particularly advance stakeholder engagement in this domain...”

Two Phases:

>Compendium of Resources

>Development of IS and Policy Lessons Learned for Researcher-Practitioner Relationships

Informing Researcher-Practice Partnerships for Policy Implementation Science

... policy implementation science is in a nascent phase; if we are strategic and systematic in application of implementation science approaches and methods to policy, there is an opportunity to expand our capacity, and subsequently the utility of policy implementation science to improve health equity...

Emmons, K. M., & Chambers, D. A. (2021). Policy Implementation Science - An Unexplored Strategy to Address Social Determinants of Health. *Ethnicity & disease*, 31(1), 133–138.

**Lessons Learned from Practice-
Informing Researcher-Practice Partnerships
for Policy Implementation Science**

SEPTEMBER 2023

Informing Researcher-Practice Partnerships for Policy Implementation Science

We interviewed Policy Practitioners from 7 national organizations

Theme:

“... Of course, research informs our policy development...”

Framing in Ross Brownson, et al's Evidence Framework:

Type 1 evidence- Why is this a problem....e.g., tobacco causes disease and death; access to insurance improves cancer outcomes; etc....

BUT- for the purposes of this work, and seeking how to facilitate collaboration between IS researchers and policy practitioners, we are really seeking information on how they collaborate with researchers on what we would see as Type 2 and 3 evidence- that is, how do these practitioners use- what works as evidence informed approaches on their strategy (Type 2)

and how do they apply this in the field (Type 3)....

Much less so...
