#### NOTE

Questions about **the design, data collection, and CPS-specific subject matter** should be directed to Tim Marshall, Associate Directorate Demographic Programs, U.S. Census Bureau, Washington, D.C. 20233. Phone: (301) 763-3806.

Questions about the **TUS subject matter** should be directed to the National Cancer Institute's Division of Cancer Control and Population Sciences, Behavior Research Program at <a href="mailto:ncidccpsbrpadvances@mail.nih.gov">ncidccpsbrpadvances@mail.nih.gov</a>

The U.S. Census Bureau reviewed this data product for unauthorized disclosure of confidential information and approved the disclosure avoidance practices applied to this release. CBDRB-FY23-0391.

#### ABSTRACT

The National Cancer Institute (NCI) of the National Institutes of Health (NIH) and the U.S. Food and Drug Administration (FDA) sponsored a Tobacco Use Supplement (TUS) to the Current Population Survey (CPS) conducted by the U.S. Census Bureau. - Washington: U.S. Census Bureau [producer and distributor], May 2023.

# Type of File:

Microdata; unit of observation is person.

#### **Universe Description:**

For May 2023, the universe is person level for all persons aged 18 and above (prior to 2007 TUS also included those 15–17 years old) in the civilian noninstitutional population of the United States and completed the labor force interview.

The probability sample selected to represent the universe consisted of 42,335 households.

The supplement universe has the following conditions:

- HRINTSTA = 1
- PRPERTYP = 2
- PRTAGE greater than or equal to 18
- HRMIS in 1, 2, 3, 4, 5, 6, 7,8
- PEELGFLG = 1

Questionnaire Structure: The supplement is structured in Sections A through K (except I)

- Section A screened for prior cigarette usage and current usage status of every day smoker, some days smoker, former smoker (*now "not at all"* smoking), and never smoker (*"never"* being defined as "*not having smoked 100 cigarettes in one's lifetime"*).
  - Section B **detailed smoking history and current use patterns** questions were asked if the person had smoked 100 cigarettes and is a self- respondent currently smoking every day.

- Section C detailed smoking history and current use patterns questions were asked if the person had smoked 100 cigarettes and is a self- respondent currently smoking some days.
- Section D asked self respondent current "every day" and "some day" smokers questions about quit smoking attempts of the past 12 months, and if none, asked if ever quit.
- Section E asked self respondent current every day and some-day smokers about a
  set of methods used (quit lines, internet or web-based tools or Apps, switching to
  other tobacco products, nicotine replacement therapy, prescription antidepressants
  used for cessation treatment, counseling, classes and support groups) during the
  most recent quit attempt within the past 12 months.
- Section F asked self respondent current every day and some-day smokers about medical (often in past also dental, but not in 2018-19, 2022-23 series) doctor advice to stop smoking.
- Section G asked self respondent current every day and some-day smokers about the person's interest, likelihood, and confidence in quitting within the next 6 months.
- Section H questions were asked of self respondent former smokers (if the person had smoked 100 cigarettes, is a self-respondent and currently not smoking at all); similar questions asked of current smokers in Sections B, C, E, and F.
- Section J asked all respondents about ever and current use of other tobacco products (cigars, regular pipes, hookah pipes, e-cigarettes, smokeless tobacco, nicotine pouches and heated tobacco products (HTP)) and asked ONLY self-respondents more detailed items about other tobacco product use.
- Section K asked self-respondents about indoor smoke-free and vape-free policies at work and at home, attitudes towards smoking in different places including in multi-unit housing. Also included is an item on awareness of tobacco industry corrective statements mandated by a federal judge.

#### **Subject-Matter Description:**

Data are provided on labor force activity for the week prior to the survey. Comprehensive data are available on the employment status, occupation, and industry of persons 15 years old and over. Also shown are demographic characteristics such as age, sex, race, Hispanic origin, marital status, veteran status, immigration status, household relationship, educational background, and some daily living functional status items.

The Tobacco Use Supplement questions were asked for randomly selected household members aged 1-2

18 years and older in May 2023. A feature, began in 2014-15 and continuing in the 2022-2023 cycle, included random selection of respondents in larger households to reduce respondent burden. If the household had only 1 or 2 supplement eligible members, then those persons were selected for interview. If the household had 3 or 4 supplement eligible members, then 2 of them were randomly selected for interview. If the household had more than 4 supplement eligible members, then 3 of them were randomly selected for interview.

For those supplement eligible persons NOT randomly selected, no supplement questions were asked, not even a proxy-response interview.

Self-response was attempted for all eligible persons selected. A proxy interview was allowed after two callbacks to attempt a self-response. Those selected for self interview who were interviewed were eligible for the entire supplement, whereas proxy respondents standing in for those self-selected ones were only given an abbreviated interview.

#### **Geographic Coverage:**

Geography data are provided at the State level and some sub-state levels for specific metropolitan identifiers (Attachment 11).

#### **Technical Description:**

File Structure: Rectangular.

**File Size:** 127,559<sup>1</sup> logical person records; 1,675 character logical record length. There are

79,291 total supplement eligible records for May 2023.

File Sort Sequence: The file is sorted by State (GESTFIPS) by household identification

number by line number.

# File Availability:

The data contained herein are for the third of the three months of the data collected for the 2022-2023 TUS wave. The main data files, technical documentation, and replicate weight files are all available for download at

https://www.census.gov/programs-surveys/cps/technical-documentation/complete.html and will also be available directly from the NCI sponsor's site at cancercontrol.cancer.gov/brp/tcrb/tus-cps/results/2022-2023.

An updated NCI TUS-CPS harmonized dataset to include data from 1992 through 2023 will be available soon. Please check the TUS website for updates and to sign-up for the TUS notifications listserv at <a href="https://cancercontrol.cancer.gov/brp/tcrb/tus-cps/index.html">https://cancercontrol.cancer.gov/brp/tcrb/tus-cps/index.html</a>.

The NCI TUS-CPS Management Team has developed the 2018-2019 Tobacco Use Supplement to the Current Population Survey (TUS-CPS) User Guide for Conducting Weighted Analyses, which includes specific information and guidance on obtaining properly weighted statistics and appropriate variance estimates using the 2018-2019 data, and features illustrative examples of different types of analyses, including statistical code in both SAS and SAS-Callable SUDAAN. This user guide is available at <a href="mailto:cancer.gov/brp/tcrb/tus-cps/results/2018-2019">cancer.gov/brp/tcrb/tus-cps/results/2018-2019</a>

#### **ATTACHMENT 2**

#### **OVERVIEW**

# **Current Population Survey**

#### Introduction

The Current Population Survey (CPS) is the source of the official government statistics on employment and unemployment. The CPS has been conducted monthly for over 60 years. Currently, we obtain interviews from about 54,000 households monthly, scientifically selected on the basis of area of residence to represent the nation as a whole, individual states, and other specified areas. Each household is interviewed once a month for four consecutive months one year, and again for the corresponding time period a year later. This technique enables us to obtain reliable month-to-month and year-to-year comparisons at a reasonable cost while minimizing the inconvenience to any one household.

Although the main purpose of the survey is to collect information on the employment situation, a very important secondary purpose is to collect information on demographic characteristics such as age, sex, race, marital status, educational attainment, family relationship, occupation, and industry. From time to time, additional questions are included on health, education, income, and previous work experience. The statistics resulting from these questions serve to update similar information collected once every 10 years through the decennial census, and are used by government policymakers and legislators as important indicators of our nation's economic situation and for planning and evaluating many government programs.

The CPS provides current estimates of the economic status and activities of the population of the United States. Because it is not possible to develop one or two overall figures (such as the number of unemployed) that would adequately describe the whole complex of labor market phenomena, the CPS is designed to provide a large amount of detailed and supplementary data. Such data are made available to meet a wide variety of needs on the part of users of labor market information.

Thus, the CPS is the only source of monthly estimates of total employment (both farm and nonfarm); nonfarm self-employed persons, domestics, and unpaid helpers in nonfarm family enterprises; wage and salaried employees; and, finally, estimates of total unemployment.

It provides the only available distribution of workers by the number of hours worked (as distinguished from aggregate or average hours for an industry), permitting separate analyses of part-time workers, workers on overtime, etc. The survey is also the only comprehensive current source of information on the occupation of workers and the industries in which they work. Information is available from the survey not only for persons currently in the labor force but also for those who are outside the labor force. The characteristics of such persons - whether married women with or without young children, disabled persons, students, older retired workers, etc., can be determined. Information on their current desire for work, their past work experience, and their intentions as to job seeking are also available.

For a more detailed discussion about the basic labor force data gathered on a monthly basis in the CPS survey, see "Explanatory Notes and Estimates of Error" in any recent issue of the *Employment and Earnings* and *Monthly Labor Review*, a Bureau of Labor Statistics periodical. This source is referred to on the next page.

### **CPS Sample Design**

The Current Population Survey (CPS) is a monthly survey designed primarily to produce national and state estimates of labor force characteristics of the civilian noninstitutional population (CNP) 16 years of age and older. It is conducted in approximately 60,000 eligible housing units throughout the United States. (Note: 'Eligible'can be simplistically defined as an occupied housing unit having at least one person in the CNP.) This sample includes 10,000 eligible housing units from the monthly supplementary sample to improve state-level estimates of health insurance coverage for low-income children, also known as the CHIP expansion. This supplementary sample has been part of the official CPS since July 2001. Thirty-two states plus the District of Columbia contain this supplementary sample each month.

The CPS sample is based on information from the 2010 Decennial Census, in accordance with usual practice. Historically, the CPS sample has been redesigned after each Decennial Census.

The CPS sample is a probability sample based on a stratified two-stage sampling scheme: selection of sample primary sampling units (PSUs) and selection of sample housing units within those PSUs. In general, the CPS sample is selected from lists of addresses obtained from the Master Address File (MAF) with updates from the United States Postal Service (USPS) twice a year. The MAF is the Census Bureau's permanent list of addresses, including their geographic locations, for individual living quarters. It is continuously maintained through partnerships with the USPS; with Federal, State, regional, and local agencies; and with the private sector, and it is used as a sample frame by many Census Bureau demographic surveys.

Approximately 72,000 housing units are assigned for interview each month, of which about 60,000 are occupied and thus eligible for interview. The remainder are units found to be destroyed, vacant, converted to nonresidential use, containing persons whose usual place of residence is elsewhere, or ineligible for other reasons. Of the 60,000 occupied housing units, approximately 10 percent are not interviewed in a given month due to temporary absence (vacation, etc.), the residents are not found at home after repeated attempts, inability of persons contacted to respond, unavailability for other reasons, and refusals to cooperate. The interviewed households contain approximately 108,000 persons 15 years old and over, approximately 27,000 children 0-14 years old, and about 450 Armed Forces members living with civilians either on or off base within these households. A more precise explanation regarding the CPS sample design is provided in "Explanatory Notes and Estimates of Error: Household Data - Sampling" in any issue of *Employment and Earnings*.

# **Relationship of Current Population Survey Files to Publications**

Each month, a significant amount of information about the labor force is published by the Bureau of Labor Statistics in the *Employment and Earnings* and *Monthly Labor Review* reports.

As mentioned previously, the CPS also serves as a vehicle for supplemental inquiries on subjects other than employment, which are periodically added to the questionnaire. From the basic and supplemental data, the Bureau of the Census issues three series of publications under the general title Current Population Reports:

P-20 Population Characteristics

P-23 Special Studies

P-60 Consumer Income

All Current Population Reports, including the other series for population estimates and projections and special censuses, may be obtained by subscription from the U.S. Government Printing Office at 202-783-3238. Subscriptions are available as follows: Population Characteristics, Special Studies, and Consumer Income series (P-20, P-23, P-60) combined, \$101 per year (sold as a package only); Population Estimates and Projections, (P-25),

\$27 per year. Single issues may be ordered separately; ordering information and prices are provided in the Bureau of the *Census Catalog and Guide*, the *Monthly Product Announcement* (MPA), and in *Census and You*. Selected reports also may be accessed on the INTERNET at http://census.gov/library/publications.html.

# **Geographic Limitations**

The CPS sample was selected so that specific reliability criteria were met nationally, for each of the 50 States and for the District of Columbia. Since 1985, these reliability criteria have been maintained through periodic additions and deletions in the State samples. Estimates formed for geographic areas identified on the microdata file which are smaller than states are not as reliable.

# Weights

Under the estimating methods used in the CPS, all of the results for a given month become available simultaneously and are based on returns for the entire panel of respondents. The CPS estimation procedure involves weighting the data from each sample person. The base weight, which is the inverse of the probability of the person being in the sample, is a rough measure of the number of actual persons that the sample person represents. Almost all sample persons in the same state have the same base weight, but the weights across states are different. Selection probabilities may also differ for some sample areas due to field subsampling, which is done when areas selected for the sample contain many more households than expected. The base weights are then adjusted for noninterview, and the ratio estimation procedure is applied.

- 1. **Noninterview adjustment**. The weights for all interviewed households are adjusted to the extent needed to account for occupied sample households for which no information was obtained because of absence, impassable roads, refusals, or unavailability of the respondent for other reasons. This noninterview adjustment is made separately for clusters of similar sample areas that are usually, but not necessarily, contained within a state. Similarity of sample areas is based on Core-Based Statistical Area (CBSA) status and size. Within each cluster, there is a further breakdown by residence. Each CBSA cluster is split by "principal city" and "balance of the CBSA." The proportion of occupied sample households not interviewed fluctuates around 8 percent depending on weather, vacations, etc.
- 2. **Ratio estimates**. The distribution of the population selected for the sample may differ somewhat, by chance, from that of the population as a whole in such characteristics as age, race, sex, and state of residence. Because these characteristics are closely correlated with labor force participation and other principal measurements made from the sample, the survey estimates can be substantially improved when weighted appropriately by the known distribution of these population characteristics. This is accomplished through two stages of ratio adjustment as follows:
  - a. *First-stage ratio estimate*. The purpose of the first-stage ratio adjustment is to reduce the contribution to variance that results from selecting a sample of PSUs rather than drawing sample households from every PSU in the nation. This adjustment is made to the CPS weights in two race cells: Black and nonblack; it is applied only to PSUs that are nonself-representing and for those states that have a substantial number of black households. The procedure corrects for differences that existed in each state cell at the time of the 2000 census between 1) the race distribution of the population in sample PSUs and 2) the race distribution of all PSUs (both 1 and 2 exclude self-representing PSUs).
  - b. Second-stage ratio estimate. This procedure substantially reduces the variability of estimates and corrects, to some extent, for CPS undercoverage. The CPS sample weights are adjusted to ensure that sample-based estimates of population match independent population controls. Three sets of controls are used:
    - 1) 51 state controls of the civilian noninstitutional population 16 years of age and older
    - 2) national civilian noninstitutional population controls for 14 Hispanic and 5 nonhispanic age-sex categories
    - 3) national civilian noninstitutional population controls for 66 white, 42 black, and 10 "other" age- sex categories

The independent population controls are prepared by projecting forward the resident population as enumerated on April 1, 2000. The projections are derived by updating demographic census data with information from a variety of other data sources that account for births, deaths, and net migration. Estimated numbers of resident Armed Forces personnel and institutionalized persons reduce the resident population to the civilian noninstitutional population. Estimates of net census undercount, determined from the Post Enumeration Survey, are added to the population projections. Prior to January 2003, the projections were based on earlier censuses, and prior to January 1994, there was no correction for census undercount. A summary of the current procedures used to make population projections is given in "Revisions in the Current Population Survey Effective January 2003" in the January 2003 issue of Employment and Earnings.

### Comparability of CPS From Microdata Files With Published Sources

Although total estimates of the total population will equal published estimates, labor force estimates produced from a microdata file may not be directly comparable or identical with the published nonseasonally adjusted labor force data. The official labor force statistics published by the Bureau of Labor Statistics (BLS) are calculated using the CPS composite weight (PWCMPWGT). Anyone wanting to replicate not seasonally adjusted BLS estimates should use this weight. However, not all estimates made from a public use file will match such weighted published estimates. This is because of various steps taken in the creation of CPS public use files to protect the confidentiality of CPS respondents. Top side estimates for most major demographic and economic categories such as age, race, gender and major labor force status will agree with the published totals; however, estimates for small groups/combinations of these characteristics will differ. The same is true for any estimates for any demographic or labor force characteristic not listed above. Such estimates will be similar but not identical.

Another factor also inhibits microdata comparison with published labor force data. This is the seasonal adjustment that is applied to many published statistics. This adjustment is used to adjust for normal seasonal variations to help distinguish the underlying economic situation in month-to-month changes and is not reflected in any of the weights or variables included on the public use files.

Shown below are data from January and July 2015 which demonstrate how estimates compiled using the final weights from the microdata file may differ from the published composited estimates, with and without seasonal adjustment. Note that the composite estimation procedure was not used for estimates published from January 1994 to May 1994. For a further description of both the composite estimator and seasonal adjustment, see the most recent of the CPS Technical Paper (66 or 77).

# **Comparison of CPS Estimates from Microdata Files with Published Sources**

	Civilian Noninstitutional Population	Civilian Labor Force	Employed	Unemployed	Not in Labor Force
January 2015 Data (000's)					
Final Weights	249,723	156,311	146,658	9,653	93,412
Composited (Not Seasonally Adjusted)	249,723	156,050	146,552	9,498	93,674
Composited (Seasonally Adjusted)	249,723	157,180	148,201	8,979	92,544
July 2015 Data (000's)					
Final Weights Composited	250,876	159,112	150,176	8,936	91,764
(Not Seasonally Adjusted)	250,876	158,527	149,722	8,805	92,349
Composited (Seasonally Adjusted)	250,876	157,106	148,840	8,266	93,770

#### **ATTACHMENT 3a**

#### **OVERVIEW**

#### May 2023 Tobacco Use Supplement

#### General

U.S. Census Bureau staff conducted a Tobacco Use Supplement (TUS) to the Current Population Survey (CPS) in conjunction with the May 2023 CPS. The National Cancer Institute (NCI) and the U.S. Food and Drug Administration (FDA) currently co-sponsor the supplement. NCI has sponsored the TUS-CPS regularly since 1992 (more information on individual past waves can be found on the NCI website <a href="mailto:cancer.gov/tus-cps">cancer.gov/tus-cps</a>). The CPS is a monthly labor force survey conducted in approximately 44,000 interviewed households across the country. Attachment 8 contains a facsimile of the May 2023 TUS questions.

#### **Major changes** in content of the 2022-2023 wave included:

- Removing detailed items on use of dissolvable tobacco products.
- Removing items on exposure to federal court mandated tobacco company corrective statements about the dangers of smoking cigarettes.

#### **New items** include:

- Current use of heated tobacco products.
- Ever use of nicotine pouches.
- Current use of nicotine pouches.
- Switching to nicotine pouches to quit cigarettes/cigars.

TUS data can be used by researchers to monitor tobacco control progress; conduct tobacco-related research, including tobacco health disparities; and evaluate tobacco control programs and policies. Although the TUS has changed slightly between 1992 and 2023, it has generally contained the same information covering:

- Current cigarette smoking status and amount smoked;
- Use of menthol cigarettes (since 2003);
- Smoking history, quit attempts, and intention to quit;
- Level of nicotine dependence (since 2003);
- Cost of cigarettes and purchase location (since 2003);
- Medical/dental advice to quit;
- Cigar, pipe, and smokeless tobacco use;
- Harm reduction and other emerging products (since 2003);
- Workplace and home smoking restrictions; and
- Attitudes toward smoke-free policies in public places.

More recent series have included more detailed information on:

- Emerging tobacco products; e-cigarette items were added in the 2014-2015 series for the general population (while "ever use" of e-cigarettes among ONLY current and recently quit former users of any tobacco product was first introduced in May 2011).
- Use of flavored non-cigarette tobacco products; and
- Attitudes toward smoking and vaping in multi-unit housing.

The September 2022, January 2023, and May 2023 collections make up the 2022-23 TUS-CPS wave. Each file contains only TUS supplement data collected for the specific month (e.g., September 2022, January 2023, or May 2023) and its corresponding CPS data. State-level estimates will be most reliable when using data from all three months of data collection within a survey wave. For this reason, we recommend using all three files when analyzing data at the state or sub-state level.

To cite the Technical Documentation and Data Files, use the following in the above citation: **cancercontrol.cancer.gov/brp/tcrb/tus-cps/results** 

For more information about past, current and future NCI TUS, past data files' citations, data reports, and publications utilizing supplement data, see the NCI website: **cancercontrol.cancer.gov/brp/tcrb/tus-cps** 

The NCI TUS-CPS Management Team has developed the 2018-2019 Tobacco Use Supplement to the Current Population Survey (TUS-CPS) User Guide for Conducting Weighted Analyses, which includes specific information and guidance on obtaining properly weighted statistics and appropriate variance estimates using the 2018-2019 data, and features illustrative examples of different types of analyses, including statistical code in both SAS and SAS-Callable SUDAAN. The principles and considerations included in this guide are applicable to the 2022-23 data. This user guide is available at cancercontrol.cancer.gov/brp/tcrb/tus-cps/questionnaires-data#2018

#### **Data Collection**

Respondents are included in the 2022-23 TUS-CPS sample typically only once. The rotation of households in and out of the TUS-CPS sample were generally sufficiently spaced apart with months between interviewing, so that the sample did not contain many overlapping panels. This eliminated most individuals from being included in the sample twice within the 2022-23 main data files.

The 2022-2023 Tobacco Use Supplement Items. The Supplement consisted of Items PEA1 through SINTTP. Most CPS household members aged 18 years and older who had completed CPS Core items were eligible for these items in May 2023.

**Respondent burden reduction.** A new feature that was first implemented in the 2014-15 wave and continued in this 2022-2023 wave consisted of *random selection* of respondents in *larger households* to reduce respondent burden. If the household had only 1 or 2 supplement eligible members, then those persons were selected for self- interview. If the household had 3 or 4 supplement eligible members, then 2 of them were randomly selected for self-interview. If the household had more than 4 supplement eligible members, then 3 of them were randomly selected for self-interview.

For those supplement eligible persons NOT randomly selected for self-interview, no supplement questions were asked. This is a change from the previous collections for this supplement earlier waves. A proxy interview was implemented for a selected self- interview respondent ONLY after two failed callback attempts.

# Items for Both Proxy and Self-Respondents

Self-respondents were eligible for the entire supplement, whereas proxy respondents were only eligible for certain items. Information was collected from proxies on topics such as smoking status (Items PEA1 – PEA3) and the use of non-cigarette tobacco products; cigars (including cigar types: large/regular cigars, cigarillos, and little filtered cigars), pipes (asked separately about regular pipes and water pipes/hookah), electronic cigarettes (e-cigarettes), smokeless tobacco (including snuff, dip, chewing tobacco, and snus), nicotine pouches and heated tobacco products (HTP). (Items PEJ1a@1-6 and PEJ2a@1-6).

#### Items for Self-Respondents Only

In addition to the smoking and other tobacco use status questions, self-respondents were asked various questions depending on their smoking/tobacco use status. See details for Questionnaire Sections B-K in ATTACHMENT 1- ABSTRACT.

#### Special Administrative Items

We also collected some special questions, such as type of interview [self (full) interview, proxy interview], the language in which the interview was conducted, the survey method (telephone vs. personal-visit interviews), Computer Assisted Telephone Interviewing (CATI) vs. Computer Assisted Personal Interviewing (CAPI), and the date of the interview.

#### **Note about Respondent Universe on Smoking Quitting Attempts:**

Beginning with the 2003 TUS-CPS, both every-day and some-day current smokers who smoked at least 12 days in the last 30 days were asked about attempts to try to quit smoking lasting at least one day, including characteristics of the attempt(s). We asked those some-days smokers smoking less than 12 days during the past 30 days whether during the past 12 months, they had TRIED to QUIT smoking COMPLETELY (Da). Before 2001-02, only every-day smokers were asked these questions on the TUS-CPS, and in 2001-02 all current cigarette smokers (both every-day and some-day) were asked these questions.

#### Items about Flavors Recoding

Some variables for past 30-day use of flavored non-cigarette tobacco products have been recoded/masked due to a low number of responses. To promote consistency within a single type of non-cigarette tobacco product and across the three survey months of the 2022-2023 wave (September 2022, January 2023, and May 2023), if a flavor had too few responses during any survey month, the flavor was recoded/masked across the wave. Thus, different flavor categories are available for different types of non-cigarette tobacco products, and the "other flavor" categories may represent different combinations of flavors. See the Record Layout (Attachment 7) for specific flavor categories available for each product.

Recoding/masking a flavor with too few positive responses involved changing all "yes" responses for that flavor to "no" responses and changing the variable name's prefix to indicate that topcoding has taken place (e.g., a variable name beginning with PEJFLA would be changed to PTJFLA). For that same product, the response to the "other" flavor variable would be changed from "no" to "yes," if it was not "yes" already. The "other" flavor variable's name would also be changed to indicate that topcoding has taken place.

# **Data Processing**

The data processing involved editing the May 2023 Supplement data. This process is described in the next section.

#### Edits, Allocations, and Recodes

**Regular Edits** Data processing involved a consistency edit of all supplement items. The consistency edit ensured that the entries within an individual record followed the correct skip pattern.

Other Edits We also edited the supplement data based on patterns of response, such as:

- Making check items consistent with entries;
- Making the various records of proxy/self consistent with each other; and
- Assigning a code "88" in the variable PES78 when we knew that the interview was done by a proxy, but we did not know by whom.

**Recodes** We also created an interview status recode and a smoking status recode.

- The interview status recode is identified by the variable "INTRVIEW" where Code 1 is a TUS interview (self or proxy). Code 2 refers to non-interviews among those *originally* eligible for the supplement who are adults 18 years and older who are members of CPS interviewed households and not active duty members of the armed forces. Thus, Code 2 also includes those excluded from *final* eligibility and not interviewed due to having incomplete CPS interviews or those not randomly selected for supplement interview, as well as those nonresponses to TUS interview. Code -1 refers to those records ineligible from the start for TUS interview because they are CPS non-response household records, are children (0-14 years of age), adults 15-17 years of age, or on active duty in the armed forces.
- The smoking status recode is identified by the variable "SMOKSTAT" where Code 1 is a "never smoker," Code 2 is an "every day smoker," Code 3 is a "some days smoker," Code 4 is a "former smoker," and Code -9 is "indeterminate (unknown) smoking status. This recode refers to the smoking status based on the "100 cigarettes" definition of smoking, Thus, those 18-34 year olds who responded No, Don't Know (DK), or Refused (R) to the PEA1 item ("Have you EVER smoked 100....) who were also asked item PEA3 ("Do you NOW smoke every day, some days, or Not at all?") to explore experimental current smoking, are categorized according to whether or not they answered YES, or NO/DK/R to PEA1 (EVER smoked at least 100 cigarettes) and ONLY a Yes response to A1 had their A3 responses considered.

*Disclosure Avoidance Methods* Variables indicating either a number of cigarettes smoked during a time period or a price paid for cigarettes were subjected to disclosure avoidance techniques, by topcoding the value, and for the price paid items, rounding to the nearest five cents in addition to topcoding by state. More detail about these disclosure avoidance techniques and how they were determined will be provided at a later date.

The values and position locations for each variable are defined and identified in the supplement Record Layout (Attachment 7). Skip patterns instead of universes are provided in the questionnaire facsimile in Attachment 8.

#### Weighting

**PWSSWGT for Labor Force Data** All adult records retain the "basic CPS weight," which controls for age, race, sex, and Hispanic origin estimates and for individual state 16+ estimates. Use the basic CPS final weight PWSSWGT for tallying the labor force items. For a description of this weight, see Attachment 2, "Overview of the Current Population Survey."

*Special Supplement Weights* This file contains two special supplement weights: a supplement non-response adjustment weight and a supplement self-only non-response adjustment weight. In addition to maintaining national demographic totals (for age, sex, race, and origin), these weights were designed to maintain each state's population total.

#### Supplement Non-Response and Self-only Non-Response Weights

- Use the supplement non- response adjustment weight PWNRWGT when using ALL respondents (self or proxy) for tallying the limited set of tobacco use status supplement items.
- When you are interested in ONLY SELF- response analysis (especially for those detailed items ONLY asked on the FULL self-response interview), use the supplement self-only non-response adjustment weight PWSRWGT for tallying the supplement items.

*Special Replicate Weights File*. A set of special replicate weights for making variance estimates such as standard errors and creating confidence intervals to account for the complex sample design of CPS and TUS have been created and exist on separate files. Replicate weight files are available from the Census Bureau at (census.gov/data/datasets/time-series/demo/cps/cps-supp\_cps-repwgt.html) and are also directly available from the NCI TUS website cancercontrol.cancer.gov/tus-cps/results.

#### May 2023 NCI and FDA co-sponsored TUS-CPS Files

*CPS Labor Force Data*. The May 2023 CPS file contains 127,559 records. The first 1,000 characters contain the labor force data for each record. Attachment 6 contains the CPS Basic Items Record Layout, which includes the variable name, character size, location on the record, universe, and the possible values of each basic CPS variable included on the file.

#### PRPERTYP determines the type of record as follows:

#### **PRPERTYP**

- 1 =Child household member (0-14 years old)
- 2 = Adult civilian household member (15 + years old)
- 3 = Adult Armed Forces household member (15 + years old)

HRINTSTA determines the interview status of the household.

#### **HRINTSTA**

- 1 = Interviewed
- 2 = Type A Non-interview (These records represent households that were eligible for CPS interview but were not interviewed because no one was home, household members were temporarily absent, etc.)
- 3 = Type B Non-interview (These records represent sample addresses determined to be ineligible for the CPS by virtue of a temporary situation, such as being vacant, nonresidential, etc. These households could become eligible for a CPS interview.)
- 4 = Type C Non-interview (These records represent sample addresses determined to be ineligible for CPS by virtue of a permanent change such as demolished, condemned, etc. These addresses will not be visited again for CPS interviews.)

The Total Number of Records is Determined by Combining the Values of PRPERTYP (1-3) and HRINTSTA (2-4).

The values of PRPERTYP are:

37. 2022
May 2023
16.076

**Unweighted Counts** 

	Way 2023
1 = Child	16,976
2 = Adult Civilian, 15+	83,351
3 = Adult, Armed Forces	329
Total	100,656

The values of HRINTSTA are:

1 = Interview	$100,656^{1}$
2 = Type A Non-interview	17,558
3 = Type B Non-interview	8,943
4 = Type C Non-interview	402
	127,559

<sup>&</sup>lt;sup>1</sup> Equal to PRPERTYP in 1, 2 or 3

\_

# **Supplement Response (Non-Response) and Supplement Self-Only Response (Non-Response) Rates**

**Non-response:** The effect of non-response cannot be measured directly, but one indication of its potential effect is the supplement response rate (or non-response rate). For the May 2023 basic CPS, the household-level response rate was 70.7 percent. The person-level response rates for the Tobacco Use Supplement were 77.3 percent for the total (allowing all self and proxy responses) and 54.3 percent for self-response only (counting proxy responses as non-responses).

Since the basic CPS non-response rate is a household-level rate and the Tobacco Use Supplement non-response rate is a person-level rate, we cannot combine these rates to derive an overall non-response rate. Nonresponding households may have fewer persons than interviewed ones, so combining these rates may lead to an overestimate of the true overall non-response rate for persons for the Tobacco Use Supplement. In order for an individual to be eligible for the supplement, the individual's basic CPS questionnaire must have been completed. Final eligibility is further limited to those who were randomly selected based on household size for FULL self-response interview.

The TUS response rate is calculated as the percentage of those who completed the TUS (interviewed) to those who were eligible to complete it after all previous exclusions.

For the break-down by response type and sample size, see the chart below.

May 2023	Count	Percent
Total Eligible for TUS Interview	68,217	100.0
Self Respondents	37,068	54.3
Proxy Respondents	15,662	23.0
Non-Respondents	15,487	22.7

The Total Number of TUS-CPS Interviewed Adults 18+ (INTRVIEW=1) for May 2023 is: 52,730<sup>2</sup>

Those INELIGIBLE for the TUS (N=48,268) include:

- children 0-14 years of age (N=16,976),
- adults 15-17 years of age (N = 3,885),
- those adults in the Armed Forces (N=329),
- those with incomplete CPS interviews (N = 175) and
- CPS non-interviewed persons (N = 26,903).

Tobacco Use Supplements (TUS-CPS)

# TUS-CPS Data Harmonization and Its Linkages to Other CPS Supplements and Health Outcomes Data

#### **Data Harmonization**

Data from 1992-1993 through the 2022-2023 waves of the TUS-CPS have been harmonized into a single file by NCI to provide a more robust data source by increasing the sample size for measures and to allow for more seamless tracking of trends over time. Please visit <a href="mailto:cancer.gov/brp/tcrb/tus-cps/results">cancercontrol.cancer.gov/brp/tcrb/tus-cps/results</a> for more information on the harmonized data and see 2019 Workshop presentation, <a href="mailto:cancer.gov/brp/tcrb/tus-cps/workshops/2019/TUSSRNT2019WorkshopPresent.pdf">cancer.gov/brp/tcrb/tus-cps/workshops/2019/TUSSRNT2019WorkshopPresent.pdf</a>"

# **Harmonized Topics**

A selection of core variables from CPS were included in harmonization, including a number of demographic, geographic, occupational, and economic variables. New for 2022-23, cohabitation living arrangement was harmonized starting in 2010-11. Harmonized topics from the TUS-CPS include:

- Cigarette use, both current and prior usage among daily and nondaily smokers. Also includes menthol use since 2003
- Workplace and home smoking restrictions
- Attitudes toward smoke-free policies in indoor work areas/public places (no harmonization for smoke-free attitudes for multi-unit housing which started in 2014-15 and will later be harmonized with 2018-19 and future data)
- Advice by physician/dentist to quit smoking
- Health perceptions/beliefs (harm reduction)
- Smoking history including cessation attempts and aids used for both current and former smokers
- Other tobacco products: cigar, pipe, and smokeless tobacco use; other emerging products, including e-cigarettes and heated tobacco products.
- Hispanic ethnicity origin categories harmonized from waves 1992-93 to 2022-23
- Asian race categories harmonized from waves 2014-15 to 2022-23

#### **Data Collection**

Respondents are included in a TUS-CPS sample (wave) typically only once. The rotation of households in and out of sample for the TUS-CPS was generally sufficiently spaced, with months between interviewing so the sample did not contain many overlapping panels. This spacing eliminated most individuals being in the sample twice within the various TUS waves main data files. Intentional exceptions to this are for those longitudinal cohorts in which follow-up was a goal such as for May 2010-2011 and February 2002-2003. A limited cohort was also created to examine changes in wording of other tobacco products for January and May 1999 with January and May 2000, respectively.

Additional information on data collection waves can be found on the NCI website <u>cancercontrol.cancer.gov/tus-cps/results.html</u> and in the technical documentation for each individual month's data collection.

# Information on TUS-CPS Linkages to Other CPS Supplements and Health Outcomes Data

A unique feature of the CPS is its panel design, in which each household in the sample is surveyed for four consecutive months (panels # 1-4) and then for four more consecutive months (panels # 5-8) nine months later. SEE:

- Attachment # 2- Overview of the Current Population Survey in this Technical Documentation, and
- U.S. Department of Commerce. 2019. Current Population Survey: Design and Methodology Technical Paper 77. Washington, D.C. U.S. Census Bureau [census.gov/programs-surveys/cps/methodology/CPS-Tech-Paper-77.pdf].

Due to this sampling strategy a subset of persons who were in sample for any given month of TUS-CPS fielding (e.g., September 2022, January 2023, or May 2023) can be linked with other CPS Basic and Supplement data from surveys conducted within about + /- 15 months of a TUS-CPS. This affords an opportunity to not only create a special cohort follow-up (as we did in Feb. 2002-03 and May 2010-11), but also to include other topics in analysis such as those from the March Annual Social and Economic Supplement (ASEC), Computer and Internet and Use, American Time Use (ATUS), Voting and Registration, Food Security, Veterans, and other CPS Supplements.

# For a listing of CPS Supplements, see <a href="mailto:census.gov/programs-">census.gov/programs-</a>

surveys/cps/about/supplemental-surveys.html

For specific CPS Supplements see the Census CPS ftp website for individual Supplement's Technical Documentation and data download at

census.gov/programs-surveys/cps/technical-documentation/complete.html

For some examples of recent info see:

- March Annual Social and Economic (ASEC) Supplement: census.gov/programs-surveys/cps.html
- Computer and Internet Use Supplement: census.gov/topics/population/computer-internet.html
- American Time Use Supplement (ATUS): <u>bls.gov/tus/</u>
- Voting and Registration Supplement: <u>census.gov/programs-surveys/cps/techdocs/cpsnov18.pdf</u> and <u>census.gov/topics/public-sector/voting/data.html</u>
- Food Security Supplement:
  <a href="mailto:census.gov/programs-surveys/cps/techdocs/cpsdec17.pdf">census.gov/programs-surveys/cps/techdocs/cpsdec17.pdf</a> and
  <a href="mailto:ers.usda.gov/data-products/food-security-in-the-united-states/">ers.usda.gov/data-products/food-security-in-the-united-states/</a>
- Veterans Supplement:census.gov/programs-surveys/cps/techdocs/cpsaug17.pdf

# For matching variables and procedures for merging other CPS Supplement data to the 2022-23 TUS-CPS files and earlier TUS-CPS series, see:

- Census Bureau website document on linking the CPS public use data files, <u>census.gov/programs-</u> surveys/cps/methodology/How%20To%20Link%20CPS%20Public%20U se%20Files.pdf
- Census Bureau technical documentation <u>census.gov/programs-surveys/cps/</u>techdocs/cpsmay10-11.pdf
- NCI TUS-CPS workshops cancercontrol.cancer.gov/brp/tcrb/tus-cps/workshops

#### For how to generally reweight a subset of multiple panel data from the same individuals, see:

- the NCI report describing how we reweighted the TUS 2002-2003 Overlap (Longitudinal) Cohort data: <a href="mailto:cancer.gov/brp/tcrb/tus-cps/TUS-CPS">cancercontrol.cancer.gov/brp/tcrb/tus-cps/TUS-CPS</a> overlap.pdf
- census.gov/programs-surveys/cps/techdocs/cpsmay10-11.pdf

TUS-CPS data can also be linked to health outcomes data with the National Longitudinal Mortality Study (NLMS). Currently TUS-CPS data is linked to the March Annual Social and Economic Supplement (ASEC) data, an additional CPS supplement, which is the basis of the cohorts in the NLMS. NLMS consists of the TUS-CPS and March ASEC linkages through 2011. Health outcomes data include primarily disease-specific cause mortality through its match to the National Death Index (NDI). The Tobacco Longitudinal Mortality Study (TLMS) consists of TUS-CPS from September 1985 to July 2018 linked with the NDI through 2019. Future opportunities will include linkages with North American Association of Central Cancer Registries (NAACCR), Medicare claims data. See the following websites for more information.

- <u>census.gov/nlms</u> and <u>census.gov/topics/research/nlms.Reference Manual</u>
- census.gov/topics/research/tlms
- cancercontrol.cancer.gov/brp/tcrb/tus-cps/linkages

#### **ATTACHMENT 4**

#### **GLOSSARY**

#### **Current Population Survey**

**Age** - Age classification is based on the age of the person at his/her last birthday. The adult universe (i.e., population of marriageable age) is comprised of persons 15 years and over for CPS labor force data.

**Allocation Flag -** Each edited item has a corresponding allocation flag indicating the nature of the edit. See the attachment on allocation flags for more information. The second character of the item name is always "X".

**Armed Forces -** Demographic information for Armed Forces members (enumerated in off-base housing or on-base with their families) is included on the CPS data files. No labor force information is collected of Armed Forces members in any month. In March, supplemental data on income are included for Armed Forces members. This is the only month that non-demographic information is included for Armed Forces members.

Civilian Labor Force - (See Labor Force.)

**Class of Worker -** This refers to the broad classification of the person's employer. These broad classifications for current jobs are:

- 1) Federal government
- 2) State government
- 3) Local government
- 4) Private industry (including self-employed, incorporated)
- 5) Self-employed (not incorporated)
- 6) Working without pay

**Domain -** The domain for an item is a list or range of its possible values. Note that all unedited items have possible values of -1 (blank), -2 (don't know), and -3 (refused). Since all items have these possible values, they are not shown as valid entries for each item.

**Duration of Unemployment** - Duration of unemployment represents the length of time (through the current survey week) during which persons classified as unemployed are continuously looking for work. For persons on layoff, duration of unemployment represents the number of full weeks since the termination of their most recent employment. A period of two weeks or more during which a person is employed or ceased looking for work is considered to break the continuity of the present period of seeking work.

**Earners, Number of -** The file includes all persons 15 years old and over in the household with \$1 or more in wages and salaries, or \$1 or more of a loss in net income from farm or nonfarm self-employment during the preceding year.

**Edited item** - An edited item is allocated or imputed by the processing system. In most cases this means allocating a value where the unedited item contains a value of blank, "don't know", or "refused". The second character of the item name is always "E".

An edited version of an item exists only if that item is processed through the edits. If the edits never deal with a particular item, then that item only has an unedited version.

Since the instrument enforces skip patterns and consistency between many items, the edits are left mainly with the job of allocating missing values. Also, since an interviewer is allowed to "back up" in the interview, there may be "off-path" items filled in the unedited data. The edits also blank these off-path items if an edited version of the items exists.

**Education** - (See Level of School Completed.)

**Employed** - (See Labor Force.)

**Family-** A family is a group of two persons or more (one of whom is the householder) residing together and related by birth, marriage, or adoption. All such persons (including related subfamily members) are considered as members of one family. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members.

**Family Household** - A family household is a household maintained by a family (as defined above), and may include among the household members any unrelated persons (unrelated subfamily members and/or secondary individuals) who may be residing there. The number of family households is equal to the number of families. The count of family household members differs from the count of family members, however, in that the family household members include all persons living in the household, whereas family members include only the householder and his/her relatives. (See the definition of Family).

**Family Weight** - This weight is used only for tallying family characteristics. In March, the weight on the family record is the March supplement weight of the householder or reference person.

**Final Weight** - Used in tabulating labor force items in all months, including March. The final weight is controlled to independent estimates for:

- 1) States
- 2) Origin, Sex, and Age
- 3) Age, Race, and Sex

This weight should not be used when tabulating March supplement data.

**Full-Time Worker**– Persons on full-time schedules include persons working 35 hours or more, persons who worked 1-34 hours for noneconomic reasons (e.g., illness) and usually work full-time, and persons "with a job but not at work" who usually work full-time.

**Group Quarters**-Group quarters are noninstitutional living arrangements for groups not living in conventional housing units or groups living in housing units containing nine or more persons unrelated to the person in charge.

**Head Versus Householder -** Beginning with the March 1980 CPS, the Bureau of the Census discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" are used.

**Highest Grade of School Attended** - (See Level of School Completed.)

**Hispanic/Non-Hispanic Origin** - A person's Hispanic/Non-Hispanic status in this file is determined on the basis of a question that simply asks "(Is/Are) (Name/you) Hispanic?"

**Hours of Work -** Hours of work statistics relate to the actual number of hours worked during the survey week. For example, a person who normally works 40 hours a week but who is off on the Veterans Day holiday is reported as working 32 hours even though he is paid for the holiday.

For persons working in more than one job, the figures related to the number of hours worked in all jobs during the week. However, all the hours are credited to the major job.

**Household** - A household consists of all the persons who occupy a house, an apartment, or other group of rooms, or a room, which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied as separate living quarters; that is, when the occupants do not live with any other person in the structure, and when there is direct access from the outside or through a common hall. The count of households excludes persons living in group quarters, such as military barracks and institutions. Inmates of institutions (mental hospitals, rest homes, correctional institutions, etc.) are not included in the survey.

**Household Weight** - The household weight is used for tallying household characteristics. In March, the household weight is the March Supplement weight of the householder.

**Householder** - The householder refers to the person (or one of the persons) in whose name the housing unit is owned or rented (maintained) or, if there is no such person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly by a married couple, the householder may be either the husband or the wife. The person designated as the householder is the "reference person" to whom the relationship of all other household members, if any, is recorded.

**Householder With No Other Relatives in Household** - A householder who has no relatives living in the household. This is the entry for a person living alone. Another example is the designated householder of an apartment shared by two or more unrelated individuals.

**Householder With Other Relatives (Including Spouse) in Household -** The person designated as householder if he/she has one or more relatives (including spouse) living in the household.

**Industry, Occupation, and Class of Worker (I&O) Current Job** (basic data) - For the employed, current job is the job held in the reference week (the week before the survey). Persons with two or more jobs are classified in the job at which they worked the most hours during the reference week. The unemployed are classified according to their latest full-time job lasting two or more weeks or by the job (either full-time or part-time). The I & O questions are also asked of persons not in the labor force who are in the fourth and eighth months in sample and who have worked in the last five years.

**Job Seekers** - All unemployed persons who made specific efforts to find a job sometime during the 4-week period preceding the survey week.

**Longitudinal Weight** - Used for gross flows analysis. Only found on adult records matched from month to month.

**PEMLR** (**Major Labor Force Recode**) - This classification is available for each civilian 15 years old and over according to his/her responses to the monthly (basic) labor force items.

**Labor Force -** Persons are classified as in the labor force if they are employed, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" includes all civilians classified as employed or unemployed.

The file includes labor force data for civilians age 15 and over. However, the official definition of the civilian labor force is age 16 and over.

#### 1. Employed

Employed persons comprise (1) all civilians who, during the survey week, do any work at all as paid employees or in their own business or profession, or on their own farm, or who work 15 hours or more as unpaid workers on a farm in a business operated by a member of the family; and (2) all those who have jobs but who are not working because of illness, bad weather, vacation, or labor-management dispute, or because they are taking time off for personal reasons, whether or not they are seeking other jobs. These persons would have a Monthly Labor Force Recode (MLR) of 1 or 2 respectively in characters 180-181 of the person record which designates "at work" and "with a job, but not at work." Each employed person is counted only once. Those persons who held more than one job are counted in the job at which they worked the greatest number of hours during the survey week. If they worked an equal number of hours at more than one job, they are counted at the job they held the longest.

#### 2. Unemployed

Unemployed persons are those civilians who, during the survey week, have no employment but are available for work, and (1) have engaged in any specific job seeking activity within the past 4 weeks such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) are waiting to be called back to a job from which they had been laid off; or (3) are waiting to report to a new wage or salary job within 30 days. These persons would have an MLR code of 3 or 4 in characters 180-181 of the person record. The unemployed includes job leavers, job losers, new job entrants, and job reentrants.

#### a. Job Leavers

Persons who quit or otherwise terminate their employment voluntarily and immediately begin looking for work.

#### b. Job Losers

Persons whose employment ends involuntarily, who immediately begin looking for work, and those persons who are already on layoff.

#### c. New Job Entrants

Persons who never worked at a full-time job lasting two weeks or longer.

#### d. Job Reentrants

Persons who previously worked at a full-time job lasting two weeks or longer but are out of the labor force prior to beginning to look for work.

Finally, it should be noted that the unemployment rate represents the number of persons unemployed as a percent of the civilian labor force 16 years old and over. This measure can also be computed for groups within the labor force classified by sex, age, marital status, race, etc. The job loser, job leaver, reentrant, and new entrant rates are each calculated as a percent of the civilian labor force 16 years old and over; the sum of the rates for the four groups thus equals the total unemployment rate.

#### 3. Not in Labor Force

All civilians 15 years old and over who are not classified as employed or unemployed. These persons are further classified by major activity: retired, unable to work because of long-term physical or mental illness, and other. The "other" group includes, for the most part, students and persons keeping house. Persons who report doing unpaid work in a family farm or business for less than 15 hours are also classified as not in the labor force.

For persons not in the labor force, data on previous work experience, intentions to seek work again, desire for a job at the time of interview, and reasons for not looking for work are asked only in those households that are in the fourth and eighth months of the sample, i.e., the "outgoing" groups, those which had been in the sample for three previous months and would not be in for the subsequent month.

Persons classified as NILF have an MLR code of 5-7 in characters 180-181 of the person record.

**Layoff** - A person who is unemployed but expects to be called back to a specific job. If he/she expects to be called back within 30 days, it is considered a temporary layoff; otherwise, it is an indefinite layoff.

Level of School Completed/Degree Received - These data changed beginning with the January 1992 file. A new question, "What is the highest level of school ... has completed or the highest degree ... has received?" replaced the old "Highest grade attended" and "Year completed" questions. The new question provides more accurate data on the degree status of college students. Educational attainment applies only to progress in "regular" school. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior high), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools is counted only if the credits obtained are regarded as transferable to a school in the regular school system.

**Looking for Work** - A person who is trying to get work or trying to establish a business or profession.

**Marital Status** - The marital status classification identifies four major categories: single (never married), married, widowed, and divorced. These terms refer to the marital status at the time of enumeration.

The category "married" is further divided into "married, civilian spouse present," "married, Armed Force spouse present," "married, spouse absent," "married, Armed Force spouse absent," and "separated." A person is classified as "married, spouse present" if the husband or wife is reported as a member of the household even though he or she may be temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Persons reported as "separated" included those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily estranged from their spouses because of marital discord.

For the purpose of this file, the group "other marital status" includes "widowed and divorced," "separated," and "other married, spouse absent."

**Month-In-Sample** - The term is defined as the number of times a unit is interviewed. Each unit is interviewed eight times during the life of the sample.

**Never Worked** - A person who has never held a full-time civilian job lasting two consecutive weeks or more.

**Nonfamily Householder** - A nonfamily householder (formerly called a primary individual) is a person maintaining a household while living alone or with nonrelatives only.

**Nonworker** - A person who does not do any work in the calendar year preceding the survey.

Nonrelative of Householder With No Own Relatives in Household - A nonrelative of the householder who has no relative(s) of his own in the household. This category includes such nonrelatives as a foster child, a ward, a lodger, a servant, or a hired hand, who has no relatives of his own living with him in the household.

**Nonrelative of Householder With Own Relatives (Including Spouse) in Household -** Any household member who is not related to the householder but has relatives of his own in the household; for example, a lodger, his spouse, and their son.

**Other Relative of Householder** - Any relative of the householder other than his spouse or child; for example, father, mother, grandson, daughter-in-law, etc.

Out Variable - An instrument-created item that stores the results of another item.

**Own Child** - A child related by birth, marriage, or adoption to the family householder.

**Part-Time, Economic Reasons** - The item includes slack work, material shortages, repairs to plant or equipment, start or termination of job during the week, and inability to find full-time work. (See also Full-Time Worker.)

**Part-Time, Other Reasons** - The item includes labor dispute, bad weather, own illness, vacation, demands of home housework, school, no desire for full-time work, and full-time worker only during peak season.

**Part-Time Work** - Persons who work between 1 and 34 hours are designated as working "part-time" in the current job held during the reference week. For the March supplement, a person is classified as having worked part-time during the preceding calendar year if he worked less than 35 hours per week in a majority of the weeks in which he worked during the year. Conversely, he is classified as having worked full-time if he worked 35 hours or more per week during a majority of the weeks in which he worked.

Part-Year Work - Part-year work is classified as less than 50 weeks' work.

**Population Coverage** - Population coverage includes the civilian population of the United States plus approximately one million members of the Armed Forces in the United States living off post or with their families on post but excludes all other members of the Armed Forces. This file excludes inmates of institutions. The labor force and work experience data are not collected for Armed Forces members.

**Processing Recode** - An item calculated by the processing system from a combination of other items in the database. The second character of the item name is always "R".

**Race** - The population is divided into six groups on the basis of race: White, Black or African American, American Indian or Alaska Native, Asian, Native Hawaiian or Other Pacific Islander, and Other races. The 2011 CPS uses the Census 2010 question on race that allows for more than one race reporting, but does not include the Census 2010 "Some Other Race" category.

**Reentrants** - Persons who previously worked at a full-time job lasting two weeks or longer, but who are out of the labor force prior to beginning to look for work.

**Related Children -** Related children in a family include own children and all other children in the household who are related to the householder by birth, marriage, or adoption. For each type of family unit identified in the CPS, the count of own children under 18 years old is limited to single (never married) children; however, "own children under 25" and "own children of any age," include all children regardless of marital status. The totals include never-married children living away from home in college dormitories.

**Related Subfamily** - A related subfamily is a married couple with or without children, or one parent with one or more own single (never married) children under 18 years old, living in a household and related to, but not including, the householder or spouse. The most common example of a related subfamily is a young married couple sharing the home of the husband's or wife's parents. The number of related subfamilies is not included in the number of families.

**School, Major Activity -** A person who spent most of his time during the survey week attending any kind of public or private school, including trade or vocational schools in which students receive no compensation in money or kind.

**Secondary Individual -** A secondary individual is a person in a household or group quarters such as a guest, roomer, boarder, or resident employee (excluding nonfamily households and inmates of institutions) who is not related to any other person in the household or group quarters.

**Self-Employed -** Self-employed persons are those who work for profit or fees in their own business, profession or trade, or operate a farm.

**Stretches of Unemployment -** A continuous stretch is one that is not interrupted by the person getting a job or leaving the labor market to go to school, to keep house, etc. A period of two weeks or more during which a person is employed or ceased looking for work is considered to break the continuity of the period of seeking work.

**Unable to Work -** A person is classified as unable to work because of long-term physical or mental illness, lasting six months or longer.

**Unedited item -** An item that is produced by the computer automated instrument, either collected during the interview or created by the instrument. The second character of the item name is always "U".

**Unemployed -** (See Labor Force.)

**Unpaid Family Workers -** Unpaid family workers are persons working without pay for 15 hours a week or more on a farm or in a business operated by a member of the household to whom they are related by birth or marriage.

**Unrelated Individuals -** Unrelated individuals are persons of any age (other than inmates of institutions) who are not living with any relatives. An unrelated individual may be (1) a nonfamily householder living alone or with nonrelatives only, (2) a roomer, boarder, or resident employee with no relatives in the household, or (3) a group quarters member who has no relatives living with him/her. Thus, a widow who occupies her house alone or with one or more other persons not related to her, a roomer not related to anyone else in the housing unit, a maid living as a member of her employer's household but with no relatives in the household, and a resident staff member in a hospital living apart from any relatives are all examples of unrelated individuals.

**Unrelated Subfamily -** An unrelated subfamily is a family that does not include among its members the householder and relatives of the householder. Members of unrelated subfamilies may include persons such as guests, roomers, boarders, or resident employees and their relatives living in a household. The number of unrelated subfamily members is included in the number of household members but is not included in the count of family members.

Persons living with relatives in group quarters were formerly considered as members of families. However, the number of such unrelated subfamilies became so small (37,000 in 1967) that beginning with the data for 1968 (and beginning with the census data for 1960) the Bureau of the Census includes persons in these unrelated subfamilies in the count of secondary individuals.

**Veteran Status -** If a person served at any time during the four most recent wartime periods, the codes for all periods of service are entered. A person can report up to 4 periods of service. The following codes are used:

- 0 Children under 15
- 1 September 2001 or later
- 2 August 1990 to August 2001
- 3 May 1975 to July 1990
- 4 Vietnam era (Aug 1964 to Apr 1975)
- 5 February 1955 to July 1964
- 6 Korean War (July 1950 to January 1955)
- 7 January 1947 to June 1950
- 8 World War II (December 1941 to December 1946)
- 9 November 1941 or earlier

**Wage and Salary Workers -** Wage and salary workers receive wages, salary, commission, tips, or pay in kind from a private employer or from a governmental unit. Also included are persons who are self-employed in an incorporated business.

**Workers -** (See Labor Force--Employed.)

**Work Experience -** Includes those persons who during the preceding calendar year did any work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

**Year-Round Full - Time Worker -** A year-round full-time worker is one who usually worked 35 hours or more per week for 50 weeks or more during the preceding calendar year.

#### **ATTACHMENT 5**

#### HOW TO USE THE RECORD LAYOUT

Data users familiar with the CPS data files in prior years will see many similarities between the format of this file and those files released before January 1994. As in the past, there are numeric locations on the file which correspond to each variable. There is only one record layout which contains the variables for children, adults, and armed forces members. In prior years, each type of person had a separate record layout.

# **Item Naming Conventions**

- The first character of each variable name is one of the following:
  - H Household item
  - G Geography item
  - \* P Person item (includes adult items, child items, and armed forces items)
  - \* There is no need to distinguish adult, child, and armed forces items in the variable names in the new system. The recode **PRPERTYP** (located in positions 161-162) tells you what category the person is in.
- ⊄ The second character of each variable name is one of the following:
  - E Edited item
  - U Unedited item
  - X- Allocation flag (see Attachment 15 for more information)
  - W- Weight
  - R Recode
  - T Topcode
- For multiple entry items, the file contains a separate variable for each possible response. Each item has the same descriptive name but a number is added as the last digit. For example, Question 22A allows separate entries for up to 6 job search methods. The item names are **PELKM1** (this item is edited), **PULKM2**, (this item is unedited), **PULKM3**, etc. These items are located in positions 296-307 of the record layout.

NAME	SIZE	DESCRIPTION	LOCATION
PEJ1A1	2	(Have/Has) (you/name) EVER used any of the following 1283-1284 EVEN ONE TIME?	
		A regular cigar or cigarillo OR a little filtered cigar?	
		FR: Regular cigars are different from little filter cigars. They can be large cigars, or smaller in size such as cigarillos. They are usually sold individually or in packs of 2 or 3. Some common brands are Black and Mild's, Swisher Sweets Cigarillos, and Phillies Blunts, but there are others.	
		FR: Little filtered cigars are different from regular cigars and cigarillos. They resemble cigarettes in size, and are often sold in packs of 20. They are usually brown in color and have a spongy filter like a cigarette. Some common brands are Prime Time little filter cigars and Winchester little filter cigars, but there are others.

PEJ1A3_5	2	The next question is about electronic or e-cigarettes. You may also know them as vape-pens, e-hookahs, vapes or mods. Some look like cigarettes, and others look like pens or are rectangular or box-shaped. These are battery-powered, usually contain liquid nicotine, and produce vapor instead of smoke. Some popular brands include NJOY, Blu, Logic, Vuse and JUUL ( <i>PRONOUNCED LIKE "JEWEL"</i> ).	1289-1290
		(Have/Has)(you/name) EVER used E-cigarettes EVEN ONE TIME?  VALID ENTRIES: -9 No response -3 Refused -2 Don't Know -1 Not in Universe 1 Yes 2 No	

**NAME** SIZE DESCRIPTION LOCATION PEJ1A4 2 The next question is about smokeless tobacco products which 1291-1292 are used in the mouth. This includes moist snuff, dip, spit, chew tobacco, or snus. Some popular brand names include Grizzly, Skoal, Copenhagen, and Camel Snus, among others. Smokeless tobacco products do Not include nicotine pouches such as Zyn (PRONOUNCED "zin"), Rogue, On!, and Velo (PRONOUNCED "vee-low") (Have/Has) (you/name) EVER used any of the following EVEN ONE TIME? ...SMOKELESS tobacco, such as moist snuff, dip, spit, chew tobacco or snus? FR: Snuff or dip IS COMMONLY PLACED BETWEEN THE GUM AND LIP AND SOLD IN ROUND CANS IN -- A LOOSE FORM OR A POUCH THAT LOOKS LIKE A SMALL TEA-BAG; COMMON BRANDS ARE SKOAL, COPENHAGEN AND GRIZZLY BUT THERE ARE OTHERS. Chewing or spit tobacco (ALSO TWIST, PLUG OR SCRAP) IS USUALLY PLACED IN THE SIDE OF THE MOUTH AND CHEWED AND OFTEN SOLD IN WALLET-SIZED POUCHES; COMMON BRANDS ARE REDMAN, LEVI-GARRETT, AND BEECH-NUT, BUT THERE ARE OTHERS. Snus IS A SPITLESS TOBACCO PRODUCT THAT MAY BE SOLD IN A TIN OR SLIDEPAK IN A LOOSE FORM OR IN SMALL TEABAG-LIKE POUCHES; COMMON BRANDS ARE CAMEL SNUS, MARLBORO SNUS, AND SKOAL SNUS. _	nenthol questions are repeated again below for those who stopped smoking greater than 1 go (or EQUIVALENT), OR H1 = D, R as indicated in Box 26.		
H11a Thinking back to the 12 MONTHS BEFORE YOU COMPLETELY QUIT SMOKING CIGARETTES, during that time, DID YOU USUALLY SMOKE menthol or non-menthol cigarettes?			
	<ul><li>(1) MENTHOL</li><li>(2) NON-MENTHOL</li><li>(3) NO USUAL TYPE</li></ul>		
	[IF H11a = 1, GO TO H11d] [IF H11a = 2, 3, D OR R, GO TO H11c]		
H11c	Have you EVER smoked MENTHOL cigarettes for 6 months or more?		
	(1) Yes (2) No		
	[IF H11c= 1, GO TO H11d] [ELSE, GO TO SECTION J]		
H11d	For how long did you smoke MENTHOL cigarettes?		
FR: READ FIRST 4 CHOICES			
	<ol> <li>(1) All or nearly all the years you have smoked</li> <li>(2) Most of the years you have smoked</li> <li>(3) Half of the years you have smoked, or</li> <li>(4) Less than half the years you have smoked</li> <li>(5) IF VOLUNTEERED: LESS THAN ONE YEAR</li> </ol>		
	[GO TO SECTION J]		

# SECTION J. OTHER TORACCO USE - ALL RESPONDENTS

	SECTION 9. OTHER TODACCO USE - ALL REST ONDER TS
J	The next questions are about the use of tobacco other than in cigarettes.
	ENTER 1 TO CONTINUE
J1a	(Have/Has) (you/name) EVER used any of the following EVEN ONE TIME?
	(1) YES (2) NO
	J1a1    A regular cigar or cigarillo (in Spanish use "medium size cigar" instead of the word "cigarillo") OR a little filtered cigar?
INCI	IF ASKED, "cigar smoking" ONLY INCLUDES CIGAR <u>TOBACCO</u> . IT DOES <u>NOT</u> LUDE SMOKING CIGARS ONLY WITH MARIJUANA (OR "BLUNTS"), HASHISH OTHER SUBSTANCES.
cigar INST INDI AND	Regular cigars ARE DIFFERENT FROM <u>little filtered cigars</u> . THEY CAN BE <u>large</u> s, OR SMALLER IN SIZE SUCH AS <u>cigarillos</u> (IN SPANISH USE "medium size cigars" <u>FEAD OF THE WORD "cigarillos" HERE</u> .) THEY ARE USUALLY SOLD VIDUALLY OR IN PACKS OF <b>2 OR 3</b> . SOME COMMON BRANDS ARE BLACK MILD'S, SWISHER SWEETS CIGARILLOS, AND PHILLIES BLUNTS, BUT THERE OTHERS.
SPAN CIGA BRO COM	Little filtered cigars ARE DIFFERENT FROM regular cigars and cigarillos (IN NISH USE "medium size cigars" instead of word "cigarillos" here). THEY RESEMBLE ARETTES IN SIZE, AND ARE OFTEN SOLD IN PACKS OF 20. THEY ARE USUALLY WN IN COLOR AND HAVE A SPONGY FILTER LIKE A CIGARETTE. SOME IMON BRANDS ARE PRIME TIME, WINCHESTER, AND CHEYENNE LITTLE ERED CIGARS, BUT THERE ARE OTHERS.
	J1a2   A regular pipe filled with tobacco?
INCI PIPE	IF ASKED, "pipe smoking" ONLY INCLUDES PIPE TOBACCO. IT DOES NOT LUDE SMOKING HASHISH, MARIJUANA, CRACK, OR OTHER SUBSTANCES IN A . DO NOT INCLUDE WATER PIPES/HOOKAHS (who-kahs) OR OTHER NAMES:

J1a3 |\_\_| ... A water pipe or hookah (who-kah) pipe filled with tobacco?

**FR:** IF ASKED, "<u>water pipe or hookah (who-kah) pipe smoking</u>" ONLY INCLUDES PIPE <u>TOBACCO</u>. IT DOES <u>NOT</u> INCLUDE SMOKING HASHISH, MARIJUANA, CRACK, OR

OTHER SUBSTANCES IN A PIPE. A WATER PIPE OR HOOKAH (who-kah) PIPE IS ALSO REFERRED TO AS A SHISHA, NARGHILE, ARGILEH OR HUBBLE-BUBBLE.

J1a3.5 INTRO: The next question is about electronic or e-cigarettes. You may also know them as vape-pens, e-hookahs, vapes, or mods. Some look like cigarettes, and others look like pens or are rectangular or box-shaped. These are battery-powered, usually contain liquid nicotine, and produce vapor instead of smoke. Some popular brands include NJOY, Blu, Vuse, and JUUL (PRONOUNCED LIKE "JEWEL").

J1a3.5 (Have/Has)(you/name) EVER used e-cigarettes EVEN ONE TIME?

` /	YES NO

FR: E-CIGARETTES AND SIMILAR PRODUCTS CAN BE BOUGHT AS ONE-TIME, DISPOSABLE PRODUCTS, AS RE-USABLE KITS WITH A POD, CARTRIDGE, OR WITH REFILLABLE TANKS. THESE ITEMS CONTAIN A NICOTINE AND/OR FLAVORED LIQUID. SOME OF THESE PRODUCTS LOOK LIKE REGULAR CIGARETTES OR PENS, AND SOME ARE RECTANGULAR OR BOX-SHAPED. POPULAR BRANDS INCLUDE NJOY, BLU, VUSE, AND JUUL (PRONOUNCED LIKE "JEWEL).

FR: PRONOUNCE "SNUS" TO RHYME WITH "GOOSE."

J1a4 INTRO: The next question is about smokeless tobacco products which contain tobacco leaf and are used in the mouth. This includes moist snuff, dip, spit, chew tobacco, or snus. Some popular brand names include Grizzly, Skoal, Copenhagen, and Camel Snus, among others. Smokeless tobacco products do not include nicotine pouches such as Zyn (PRONOUNCED "zin"), Rogue, ON!, and Velo (PRONOUNCED "vee-low").

J1a4 (Have/Has) (you/name) EVER used smokeless tobacco EVEN ONE TIME?

` /	YES NO

FR: Snuff or dip IS COMMONLY PLACED BETWEEN THE GUM AND LIP AND SOLD IN ROUND CANS IN --A LOOSE FORM OR A POUCH THAT LOOKS LIKE A

SMALL TEA-BAG; COMMON BRANDS ARE SKOAL, COPENHAGEN AND GRIZZLY BUT THERE ARE OTHERS. DOES NOT INCLUDE NICOTINE POUCHES SUCH AS ZYN (PRONOUNCED "zin"), Rogue, ON!, OR VELO (PRONOUNCED "vee-low").

<u>Chewing or spit tobacco</u> (ALSO TWIST, PLUG OR SCRAP) IS USUALLY PLACED IN THE SIDE OF THE MOUTH AND CHEWED AND OFTEN SOLD IN WALLET-SIZED POUCHES; COMMON BRANDS ARE AMERICA'S BEST CHEW (FORMERLY KNOWN AS REDMAN), LEVI- GARRETT, AND BEECH-NUT, BUT THERE ARE OTHERS.

<u>Snus</u> IS A SPITLESS TOBACCO PRODUCT THAT MAY BE SOLD IN A TIN OR SLIDEPAK IN A LOOSE FORM OR IN SMALL TEABAG-LIKE POUCHES; COMMON BRANDS ARE CAMEL SNUS, MARLBORO SNUS, AND SKOAL SNUS. DOES NOT INCLUDE NICOTINE POUCHES SUCH AS ZYN (PRONOUNCED "zin"), Rogue, ON!, OR VELO (PRONOUNCED "VEE-LOW").

J1a5r INTRO: The next question is about nicotine pouches. These are different from other smokeless tobacco products because they do not contain any tobacco leaf.

These small white pouches contain nicotine which users place in their mouth. Some popular brand names include Zyn (PRONOUNCED "zin"), Rogue, ON!, or Velo (PRONOUNCED "vee-low").

J1a5r (Have/Has)(you/name) EVER used a nicotine pouch EVEN ONE TIME?

(1) YES	
(2) NO	
(3) NEVER HEARD (	F IT

J1a6 INTRO: The next question is about heated tobacco products. Some people refer to these as "heat-not-burn" tobacco products. These heat TOBACCO STICKS or CAPSULES to produce a vapor. They are different from e-cigarettes, which heat a LIQUID to produce a vapor. Some brands of heated tobacco products include iQOS (PRONOUNCED "eye-kos"), glo (PRONOUNCED "glow"), and Eclipse.

J1a6 (Have/Has)(you/name) ever tried a "heated tobacco product", EVEN ONE TIME?

` /	YES NO
ı	I

#### **ATTACHMENT 9**

#### INDUSTRY CLASSIFICATION

# Industry Classification Codes for Detailed Industry (4 digit) (Starting January 2020)

These categories are aggregated into 52 detailed groups and 14 major groups (see pages 10-12 of this attachment). The codes in the right-hand column are the NAICS equivalent.

These codes correspond to Items PEIO1ICD and PEIO2ICD, in positions 856-859 and 864-867 of the Basic CPS record layout in all months, **except the ASEC files**. In the **ASEC**, these codes correspond to PEIOIND and INDUSTRY, in the Person record.

Note: The Census industry codes and NAICS codes are based on the 2017 North American Industry Classification System.

2017 CENSUS CODE	DESCRIPTION	2017 NAICS CODE
	Agriculture, Forestry, Fishing, and Hunting	
0180 0190 0270	Crop production Animal production and aquaculture Forestry except logging Logging Fishing, hunting, and trapping Support activities for agriculture and forestry	111 112 1131, 1132 1133 114 115
	Mining, Quarrying, and Oil and Gas Extraction	
0380 0390 0470	Oil and gas extraction Coal mining Metal ore mining Nonmetallic mineral mining and quarrying Support activities for mining	211 2121 2122 2123 213
	Utilities	
0580 0590 0670 0680	Electric power generation, transmission and distribution Natural gas distribution Electric and gas, and other combinations Water, steam, air-conditioning, and irrigation systems Sewage treatment facilities Not specified utilities	2211 2212 Pts. 2211, 2212 22131, 22133 22132 Part of 22

#### **ATTACHMENT 10**

#### OCCUPATION CLASSIFICATION

### (Beginning January 2020)

These categories are aggregated into 23 detailed groups and 11 major groups (see pages 10-17 and 10-18). The codes in the right hand column are the 2018 SOC equivalent.

These codes correspond to items PTIO1OCD and PTIO2OCD in positions 860-863 and 868-871 of the Basic CPS record layout in all months, **except the ASEC files**. In **ASEC**, these codes correspond to items PEIOOCC and OCCUP of the Persons Record. These codes are also applicable for any other CPS supplements that collect occupation data.

7340	Maintenance and repair workers, general	49-9071
7350	Maintenance workers, machinery	49-9043
7360	Millwrights	49-9044
7410	Electrical power-line installers and repairers	49-9051
7420	Telecommunications line installers and repairers	49-9052
7430	Precision instrument and equipment repairers	49-9060
7510	Coin, vending, and amusement machine servicers and repairers	49-9091
7540	Locksmiths and safe repairers	49-9094
7560	Riggers	49-9096
7610	Helpersinstallation, maintenance, and repair workers	49-9098
7640	Other installation, maintenance, and repair workers	49-90XX

#### **DESCRIPTION**

2018 SOC CODE

# **Production, Transportation, and Material Moving Occupations**

# **Production Occupation**

7700	First-line supervisors of production and operating workers	51-1011
7720	Electrical, electronics, and electromechanical assemblers	51-2020
7730	Engine and other machine assemblers	51-2031
7740	Structural metal fabricators and fitters	51-2041
7750	Other assemblers and fabricators	51-20XX
7800	Bakers	51-3011
7810	Butchers and other meat, poultry, and fish processing workers	51-3020
7830	Food and tobacco roasting, baking, and drying machine operators and tenders	51-3091
7840	Food batchmakers	51-3092
7850	Food cooking machine operators and tenders	51-3093
7855	Food processing workers, all other	51-3099
7905	Computer numerically controlled tool operators and programmers	51-9160
7925	Forming machine setters, operators, and tenders, metal and plastic	51-4020
7950	Cutting, punching, and press machine setters, operators, and tenders, metal and plastic	51-4031
8000	Grinding, lapping, polishing, and buffing machine tool setters, operators, and tenders, metal and plastic	51-4033
8025	Other machine tool setters, operators, and tenders, metal and plastic	51-403X
8030	Machinists	51-4041
8040	Metal furnace operators, tenders, pourers, and casters	51-4050
8100	Model makers, patternmakers, and molding machine setters, metal and plastic	51-40XX
8130	Tool and die makers	51-4111
8140	Welding, soldering, and brazing workers	51-4120
8225	Other metal workers and plastic workers	51-4XXX
8250	Prepress technicians and workers	51-5111
8255	Printing press operators	51-5112
8256	Print binding and finishing workers	51-5113
8300	Laundry and dry-cleaning workers	51-6011
8310	Pressers, textile, garment, and related materials	51-6021
8320	Sewing machine operators	51-6031
8335	Shoe and leather workers	51-6040
8350	Tailors, dressmakers, and sewers	51-6050
8365	Textile machine setters, operators, and tenders	51-6060
8450	Upholsterers	51-6093
8465	Other textile, apparel, and furnishings workers	51-609X
8500	Cabinetmakers and bench carpenters	51-7011
8510	Furniture finishers	51-7021
8530	Sawing machine setters, operators, and tenders, wood	51-7041
8540	Woodworking machine setters, operators, and tenders, except sawing	51-7042
8555	Other woodworkers	51-70XX
8600	Power plant operators, distributors, and dispatchers	51-8010
8610	Stationary engineers and boiler operators	51-8021
8620	Water and wastewater treatment plant and system operators	51-8031
8630	Miscellaneous plant and system operators	51-8090

2018 CENSU CODE	DESCRIPTION	2018 SOC CODE	
8640	Chemical processing machine setters, operators, and tenders	51-9010	
8650	Crushing, grinding, polishing, mixing, and blending workers	51-9020	
8710	Cutting workers	51-9030	
8720	Extruding, forming, pressing, and compacting machine setters, operators, and tenders	51-9041	
8730	Furnace, kiln, oven, drier, and kettle operators and tenders	51-9051	
8740	Inspectors, testers, sorters, samplers, and weighers	51-9061	
8750	Jewelers and precious stone and metal workers	51-9071	
8760	Dental and ophthalmic laboratory technicians and medical appliance technicians	51-9080	
8800	Packaging and filling machine operators and tenders	51-9111	
8810	Painting workers	51-9120	
8830	Photographic process workers and processing machine operators	51-9151	
8850	Adhesive bonding machine operators and tenders	51-9191	
8910	Etchers and engravers	51-9194	
8920	Molders, shapers, and casters, except metal and plastic	51-9195	
8930	Paper goods machine setters, operators, and tenders	51-9196	
8940	Tire builders	51-9197	
8950	Helpersproduction workers	51-9198	
8990	Miscellaneous production workers, including equipment operators and tenders	51-91XX	

# **Transportation and Material Moving Occupations**

# **Transportation Occupations:**

9005	Supervisors of transportation and material moving workers	53-1000
9030	Aircraft pilots and flight engineers	53-2010
9040	Air traffic controllers and airfield operations specialists	53-2020
9050	Flight attendants	53-2031
9110	Ambulance drivers and attendants, except emergency medical technicians	53-3011
9121	Bus drivers, school	53-3051
9122	Bus drivers, transit and intercity	53-3052
9130	Driver/sales workers and truck drivers	53-3030
9141	Shuttle drivers and chauffeurs	53-3053
9142	Taxi drivers	53-3054
9150	Motor vehicle operators, all other	53-3099
9210	Locomotive engineers and operators	53-4010
9240	Railroad conductors and yardmasters	53-4031
9265	Other rail transportation workers	53-40XX
9300	Sailors and marine oilers, and ship engineers	53-50XX
9310	Ship and boat captains and operators	53-5020
9350	Parking attendants	53-6021
9365	Transportation service attendants	53-6030
9410	Transportation inspectors	53-6051
9415	Passenger attendants	53-6061
9430	Other transportation workers	53-60XX

2018 CENS CODE		2018 SOC CODE
	<b>Material Moving Occupations</b>	
9510	Crane and tower operators	53-7021
9570	Conveyor, dredge, and hoist and winch operators	53-70XX
9600	Industrial truck and tractor operators	53-7051
9610	Cleaners of vehicles and equipment	53-7061
9620	Laborers and freight, stock, and material movers, hand	53-7062
9630	Machine feeders and offbearers	53-7063
9640	Packers and packagers, hand	53-7064
9645	Stockers and order fillers	53-7065

## Specific Metropolitan Identifiers

# (Geographic Attachment for CPS Public Use File Documentation Beginning August, 2015)

- List 1. FIPS Metropolitan Area (CBSA) Codes
- List 2. FIPS Consolidated Statistical Area (CSA) Codes
- List 3. Individual Principal Cities
- List 4: FIPS County Codes

Unless otherwise noted, all definitions for geographic areas on these lists reflect the February 28, 2013 OMB definitions.

## LIST 1: FIPS Metropolitan Area (CBSA) Codes

Metropolitan Areas are defined using February 28, 2013 OMB definitions.

FIPS Code	Metropolitan (CBSA) TITLE
10180	Abilene, TX
10420	Akron, OH
10580	Albany-Schenectady-Troy, NY
10740	Albuquerque, NM
10900	Allentown-Bethlehem-Easton, PA-NJ
11100	Amarillo, TX
11460	Ann Arbor, MI
11540	Appleton, WI
11700	Asheville, NC
12020	Athens-Clarke County, GA
12060	Atlanta-Sandy Springs-Roswell, GA
12100	Atlantic City-Hammonton, NJ
12220	Auburn-Opelika, AL
12260	Augusta-Richmond County, GA-SC
12420	Austin-Round Rock, TX
12540	Bakersfield, CA
12580	Baltimore-Columbia-Towson, MD
12620	Bangor, ME
12700	Barnstable, MA
12940	Baton Rouge, LA
12980	Battle Creek, MI
13140	Beaumont-Port Arthur, TX
13460	Bend-Redmond, OR
13740	Billings, MT
13780	Binghamton, NY
13820	Birmingham-Hoover, AL
13980	Blacksburg—Christiansburg-Radford, VA
14010	Bloomington, IL
14020	Bloomington, IN
14260	Boise City, ID
14460	Boston-Cambridge-Newton, MA-NH
14500	Boulder, CO
14540	Bowling Green, KY
14860	Bridgeport-Stamford-Norwalk, CT

FIPS Code	Metropolitan (CBSA) TITLE
15180	Brownsville-Harlingen, TX
15380	Buffalo-Cheektowaga-Niagara Falls, NY
15500	Burlington, NC
15540	Burlington-South Burlington, VT
15680	California-Lexington Park, MD
15940	Canton-Massillon, OH
15980	Cape Coral-Fort Myers, FL
16060	Carbondale-Marion, IL
16300	Cedar Rapids, IA
16540	Chambersburg-Waynesboro, PA
16580	Champaign-Urbana, IL
16620	Charleston, WV
16700	Charleston-North Charleston, SC
16740	Charlotte-Concord-Gastonia, NC-SC
16820	Charlottesville, VA
16860	Chattanooga, TN-GA
16980	Chicago-Naperville-Elgin, IL-IN-WI
17020	Chico, CA
17140	Cincinnati, OH-KY-IN
17300	Clarksville, TN-KY
17420	Cleveland, TN
17460	Cleveland-Elyria, OH
17660	Coeur d'Alene, ID
17780	College Station-Bryan, TX
17820	Colorado Springs, CO
17900	Columbia, SC
17980	Columbus, GA-AL
18140	Columbus, OH
18580	Corpus Christi, TX
19100	Dallas-Fort Worth-Arlington, TX
19300	Daphne-Fairhope-Foley, AL
19340	Davenport-Moline-Rock Island, IA-IL
19380	Dayton, OH
19660	Deltona-Daytona Beach-Ormond Beach, FL
19740	Denver-Aurora-Lakewood, CO
19780	Des Moines-West Des Moines, IA
19820	Detroit-Warren-Dearborn, MI
20100	Dover, DE
20500	Durham-Chapel Hill, NC
20700	East Stroudsburg, PA

FIPS Code	Metropolitan (CBSA) TITLE
21140	Elkhart-Goshen, IN
21340	El Paso, TX
21500	Erie, PA
21660	Eugene, OR
21780	Evansville, IN-KY
22020	Fargo, ND-MN
22140	Farmington, NM
22180	Fayetteville, NC
22220	Fayetteville-Springdale-Rogers, AR-MO
22420	Flint, MI
22500	Florence, SC
22520	Florence-Muscle Shoals, AL
22660	Fort Collins, CO
22900	Fort Smith, AR-OK
23060	Fort Wayne, IN
23420	Fresno, CA
23540	Gainesville, FL
23580	Gainesville, GA
24020	Glen Falls, NY
24140	Goldsboro, NC
24340	Grand Rapids-Wyoming, MI
24540	Greeley, CO
24580	Green Bay, WI
24660	Greensboro-High Point, NC
24780	Greenville, NC
24860	Greenville-Anderson-Mauldin, SC
25180	Hagerstown-Martinsburg, MD-WV
25260	Hanford-Corcoran, CA
25420	Harrisburg-Carlisle, PA

### LIST 2: FIPS Consolidated Statistical Area (CSA) Codes

The following CSA's (Combined Statistical Areas) contain 2 or more Metropolitan Statistical Areas that are in the CPS sample and are individually identified on the public use files. Micropolitan Statistical Areas are not specifically identified in the CPS and are not used to identify CSA's nor are parts of such areas coded as belonging to CSA's. The component CBSA's identified on the CPS Public Use Files are listed for each CSA.

CSA	CBSA	CSA Title
Code	Code	Component Parts (CBSA's)
104		Albany-Schenectady, NY
104	10580	Albany-Schenectady-Troy, NY
	24020	Glen Falls, NY

## **List 3: Individual Principal Cities**

Please Note: You must use the CBSA code in combination with the city code to uniquely identify principal cities. If a county name is provided, you must incorporate the county code into any algorithm used to tabulate a specific city's characteristics. The same applies to state codes for multi-state CBSA's.

#### **Attachment 12**

# Dynamic Topcoding of Usual Hourly Earnings

The Census Bureau has introduced a dynamic topcode, implemented monthly, with topcoding applied to the top 3 percent of hourly earnings reported. This method results in fewer cases being topcoded compared to the previous method which applied topcoding based on the individual's usual hours worked variable. For individuals whose earnings are topcoded, the earnings variable contains the weighted average of the top 3% and not a cutoff value as has been done in past years. PTERNHLY, PTERNH1O, PTERNH2, and PTERNH1C are the hourly reporting variables. Below is an example of this process using fake data.

Hourly Wages	Cumulative Percent	Topcoding (Weighted Average of Top 3%)
		Average or Top 370)
2	0.15	2
2.15	0.26	2.15
3.50	0.90	3.50
•		
46.5	96.90	46.5
47	96.93	47
49.5	97.06	64.20
50	97.46	64.20
51	97.55	64.20
65	99.40	64.20
68	99.45	64.20
70	99.60	64.20
75	99.75	64.20
85	99.80	64.20
90	100.00	64.20

Furthermore, values not topcoded as above, will be rounded based on the criteria below.

Usual Hourly Earning as Reported	Rounded value on Public Use File
\$00.01 - \$00.07	\$00.05
\$00.08 - \$29.99	Nearest \$00.05
\$30.00 - \$49.99	Nearest \$00.25
\$50.00 +	Nearest \$00.50 until topcoded

#### **ATTACHMENT 12a**

#### Topcoding of Usual Hourly Earnings

This variable will be topcoded based on an individual's usual hours worked variable, if the individual's edited usual weekly earnings variable is \$999. The topcode is computed such that the product of usual hours times usual hourly wage does not exceed an annualized wage of \$150,000 (\$2,885.00 per week). Below is a list of the appropriate topcode.

Hours	Topcode	Hours	Topcode	Hours	Topcode
1	None	34	\$84.85	67	\$43.06
2	None	35	\$82.43	68	\$42.43

#### **Current Population Survey**

#### Selected Unweighted Tallies from the May 2023 Tobacco Use Supplement

For more information on the May Tobacco Use Supplement to the Current Population Survey (TUS-CPS) see TUS-CPS series web site: <a href="https://cancercontrol.cancer.gov/brp/tcrb/tus-cps/">https://cancercontrol.cancer.gov/brp/tcrb/tus-cps/</a>.

Total Records in sample: 127,559<sup>1</sup>

- records for CPS non-interviewed persons 26,903
- individuals within CPS interviewed households (HHs) 100.656

Not eligible for the supplement: 48,268<sup>2</sup>

- children and adults < 18yrs old, on active duty in armed forces and CPS incomplete – 21,365
- records for CPS non-interviewed persons 26,903

Eligible for the supplement:79,291<sup>3</sup> Supplement non-interviews:26,561<sup>4</sup>

- o CPS interview incompletes- 278<sup>5</sup>
- o not randomly selected for TUS interview 10,796
- o TUS non-response 15,487

Final eligibility for supplement interview after excluding CPS incompletes for unknown age and those not randomly selected for TUS interview – 68,217

Supplement interviews 52,730

- $\circ$  self-response 37,068
- o proxy-response 15,662

Supplement non-response: 15,487

The tallies that follow represent the 79,291 persons in sample who were eligible for the random selection for supplement interview (includes 278 with unknown age at time of interview).

<sup>&</sup>lt;sup>1</sup>INTRVIEW= -1 or 1 or 2

<sup>&</sup>lt;sup>2</sup> INTRVIEW= -1

 $<sup>^{3}</sup>$  INTRVIEW= (1 or 2)

<sup>&</sup>lt;sup>4</sup>INTRVIEW=2

<sup>&</sup>lt;sup>5</sup> Age was unknown and later edited as 18+ AFTER completion of the data collection, thus non-interviews and no chance of random selection.

# Source of the Data and Accuracy of the Estimates for the September 2022, January 2023, and May 2023 Current Population Survey Microdata File on Tobacco Use

#### **SOURCE OF THE DATA**

The data in this microdata files are from the September 2022, January 2023, and May 2023 Current Population Survey (CPS). The U.S. Census Bureau conducts the CPS every month, although this file has only September 2022, January 2023, and May 2023 data. The survey uses two sets of questions, the basic CPS and a set of supplemental questions. The CPS, sponsored jointly by the Census Bureau and the U.S. Bureau of Labor Statistics, is the country's primary source of labor force statistics for the civilian noninstitutionalized population. The National Cancer Institute (NCI) of the National Institutes of Health (NIH) and the U.S. Food and Drug Administration (FDA), both of the U.S. Department of Health and Human Services (HHS), co-sponsored the September 2022, January 2023, and May 2023 Tobacco Use Supplements (TUS). NCI has sponsored the supplemental questions for the TUS since 1992. The Centers for Disease Control and Prevention (CDC), also of the HHS, co-sponsored, with NCI, the survey waves 2001-2007.

Basic CPS. The monthly CPS collects primarily labor force data about the civilian noninstitutionalized population living in the United States. The institutionalized population, which is excluded from the universe, consists primarily of the population in correctional institutions and nursing homes (98 percent of the 4.0 million institutionalized people in the 2010 Census). Starting in August 2017, college and university dormitories were also excluded from the universe because most of the residents had usual residences elsewhere. Interviewers ask questions concerning labor force participation of each member 15 years old and older in sample households. Typically, the week containing the nineteenth of the month is the interview week. The week containing the twelfth is the reference week (i.e., the week about which the labor force questions are asked).

The CPS uses a multistage probability sample based on the results of the decennial census, with coverage in all 50 states and the District of Columbia. The sample is continually updated to account for new residential construction. When files from the most recent decennial census become available, the Census Bureau gradually introduces a new sample design for the CPS.

Every ten years, the CPS first-stage sample is redesigned  $^1$  reflecting changes based on the most recent decennial census. In the first stage of the sampling process, primary sampling units (PSUs) $^2$  were selected for sample. In the 2010 sample design, the United States was

For detailed information on the 2010 sample redesign, please reference Bureau of Labor Statistics (2014).

The PSUs correspond to substate areas (i.e., counties or groups of counties) that are geographically contiguous.

divided into 1,987 PSUs. These PSUs were then grouped into 852 strata. Within each stratum, a single PSU was chosen for the sample, with its probability of selection proportional to its population as of the most recent decennial census. In the case of strata consisting of only one PSU, the PSU was chosen with certainty.

Approximately 69,000 sampled addresses were selected from the sampling frame in September 2022, January 2023, and May 2023. Based on eligibility criteria, a percentage of these sampled addresses were sent directly to computer-assisted telephone interviewing (CATI). The remaining sampled addresses were assigned to interviewers for computer-assisted personal interviewing (CAPI).<sup>3</sup> Of all addresses in sample, about 59,000 were determined to be eligible for interview in September 2022 and January 2023. About 60,000 addresses in sample were determined to be eligible for interview in May 2023. Noninterviews occur when the occupants are not found at home after repeated calls or are unavailable for some other reason.<sup>4</sup>

Table 1 shows the number of households selected, the CATI assignment percentage, the number of households determined to be eligible for the supplement, and the number of households from which interviews were obtained from each of the three months of the TUS.

**Table 1. Current Population Survey Sampling Frame** 

Month and Year of Sample	Sample Selected	CATI	Eligible	Interviewed	
September 2022	69,000	8%	59,000	43,000	
January 2023	69,000	8%	59,000	42,000	
May 2023	69,000	7%	60,000	42,000	

Source: U.S. Census Bureau, Current Population Survey, internal data files.

Note: Numbers rounded to the nearest thousand. Percentages rounded to the nearest whole percent.

September 2022, January 2023, and May 2023 Supplements. In addition to the basic CPS questions, interviewers asked supplementary questions on tobacco use of the civilian noninstitutionalized population 18 years and older. The TUS is a large, nationally representative survey, which enables the production of national, state, and some sub-state estimates, especially when 3 months of a TUS series are combined. The TUS collected information from about 53,000, 52,000, and 53,000 respondents in September 2022, January 2023, and May 2023, respectively. Table 2 shows the approximate percentages of responses for some measures of use, by month.

For further information on CATI and CAPI and the eligibility criteria, please reference U.S. Census Bureau (2019).

Counts and estimates throughout this source and accuracy statement are rounded according to Disclosure Review Board rounding rules.

**Table 2. Tobacco Use Supplement Respondent Information** 

Supplement	Number Interviewed	Percentage of Proxy Response	Percentage of Self- Response	Percentage Telephone Interview <sup>A</sup>	Percentage Personal Interview
September 2022	53,000	25%	75%	72% (71% self-only)	28% (29% self-only)
January 2023	52,000	28%	72%	74% (73% self-only)	26% (27% self-only)
May 2023	53,000	30%	70%	71% (71% self-only)	29% (29% self-only)

Source: U.S. Census Bureau, Current Population Survey, internal data files.

Note: Numbers rounded to the nearest thousand. Percentages rounded to the nearest whole percent.

**Estimation Procedure**. This survey's estimation procedure adjusts weighted sample results to agree with independently derived population controls of the civilian noninstitutionalized population of the United States, each state, and the District of Columbia. These population controls<sup>5</sup> are prepared monthly as part of the Census Bureau's Population Estimates Program.

The population controls for the nation are distributed by demographic characteristics in two ways:

- Age, sex, and race (White alone, Black alone, and all other groups combined).
- Age, sex, and Hispanic origin.

The population controls for the states are distributed by:

- Race (Black alone and all other race groups combined).
- Age (0-15, 16-44, and 45 and over).
- Sex.

The independent estimates by age, sex, race, and Hispanic origin, and for states by selected age groups and broad race categories, are developed using the basic demographic accounting formula whereby the population from the 2020 Census data<sup>6</sup> is updated using data on the components of population change (births, deaths, and net international

A Respondents with 'CAPI' for HRMODE and 'Not in Universe' for PES81A are not included, for consistency, as we cannot determine if interview was conducted by telephone or in-person.

For additional information on population controls, including details on the demographic characteristics used and net international components, please refer to Chapters 1-3 and Appendix: History of the Current Population Survey of U.S. Census Bureau (2019).

In recent decades, the decennial census has usually provided all the data necessary to produce the population base used in the population controls. However, changes in disclosure avoidance practices and delays in the 2020 Census necessitated changes to the data sources that produce the base population for the Vintage 2021 population estimates. The updated population controls use a Blended Base that draws on the 2020 Census, 2020 Demographic Analysis Estimates, and Vintage 2020 Postcensal Population Estimates. More information on this methodology can be found at U.S. Census Bureau (2021).

migration) with net internal migration as an additional component in the state population controls.

The net international migration component of the population controls includes:

- Net international migration of the foreign born;
- Net migration between the United States and Puerto Rico;
- Net migration of natives to and from the United States; and
- Net movement of the Armed Forces population to and from the United States.

Because the latest available information on these components lags behind the survey date, it is necessary to make short-term projections of these components to develop the estimate for the survey date.

<u>Tobacco Use Supplement Estimation Procedure</u>. In addition to the CPS estimation procedure, the TUS uses a supplement noninterview adjustment and a supplement self-response adjustment. The supplement noninterview adjustment accounts for occupied sample households that responded to and completed the CPS but not the supplement questionnaire. The self-response adjustment accounts for the elimination of interviews that were completed by proxy.

NOTE: The CPS household weight (HWHHWGT) adjusts for household nonresponse. Additional calculations are needed to create a supplement household weight. There are two sets of supplement weights on this microdata file. The nonresponse weight (PWNRWGT) includes only the noninterview adjustment. The self-response weight (PWSRWGT) includes both the noninterview adjustment and the self-response adjustment.

#### **ACCURACY OF THE ESTIMATES**

A sample survey estimate has two types of error: sampling and nonsampling. The accuracy of an estimate depends on both types of error. The nature of the sampling error is known given the survey design; the full extent of the nonsampling error is unknown.

**Sampling Error**. Since the CPS estimates come from a sample, they may differ from figures from an enumeration of the entire population using the same questionnaires, instructions, and enumerators. For a given estimator, the difference between an estimate based on a sample and the estimate that would result if the sample were to include the entire population is known as sampling error. Standard errors, as calculated by methods described in "Standard Errors and Their Use," are primarily measures of the magnitude of sampling error. However, the estimation of standard errors may include some nonsampling error.

**Nonsampling Error**. For a given estimator, the difference between the estimate that would result if the sample were to include the entire population and the true population value being estimated is known as nonsampling error. There are several sources of nonsampling

error that may occur during the development or execution of the survey. It can occur because of circumstances created by the interviewer, the respondent, the survey instrument, or the way the data are collected and processed. Some nonsampling errors, and examples of each, include:

- Measurement error: The interviewer records the wrong answer, the respondent provides incorrect information, the respondent estimates the requested information, or an unclear survey question is misunderstood by the respondent.
- Coverage error: Some individuals who should have been included in the survey frame were missed.
- Nonresponse error: Responses are not collected from all those in the sample or the respondent is unwilling to provide information.
- Imputation error: Values are estimated imprecisely for missing data.
- Processing error: Forms may be lost, data may be incorrectly keyed, coded, or recoded, etc.

To minimize these errors, the Census Bureau applies quality control procedures during all stages of the production process including the design of the survey, the wording of questions, the review of the work of interviewers and coders, and the statistical review of reports.

Two types of nonsampling error that can be examined to a limited extent are nonresponse and undercoverage.

**Nonresponse**. The effect of nonresponse cannot be measured directly, but one indication of its potential effect is the nonresponse rate. Table 3 shows the unweighted nonresponse rates for the basic CPS, as well as the overall (self and proxy) nonresponse rate and the self-only nonresponse rate, for the September 2022, January 2023, and May 2023 supplements.

**Table 3. Current Population Survey Nonresponse Rates** 

Month and Year	Basic CPS (Household Nonresponse Rate)	Supplement (Self and Proxy Nonresponse Rate)	Supplement (Self-Only Nonresponse Rate)
September 2022	27.0%	23.2%	42.4%
January 2023	29.0%	22.4%	44.0%
May 2023	29.3%	22.7%	45.7%

Source: U.S. Census Bureau, Current Population Survey, internal data files.

Note: Percentages rounded to the nearest tenth of a percent.

Since the basic CPS nonresponse rate is a household-level rate and the Tobacco Use supplement nonresponse rate is a person-level rate, we cannot combine these rates to derive an overall nonresponse rate. Nonresponding households may have more or fewer persons than interviewed ones, so combining these rates may lead to an under- or overestimate of the true overall nonresponse rate for persons for the Tobacco Use supplement.

In accordance with Census Bureau and Office of Management and Budget Quality Standards, the Census Bureau will conduct an analysis to assess nonresponse bias in the Tobacco Use.

Responses are made up of complete interviews and sufficient partial interviews. A sufficient partial interview is an incomplete interview in which the household or person answered enough of the questionnaire for the supplement sponsor to consider the interview complete. The remaining supplement questions may have been edited or imputed to fill in missing values. Insufficient partial interviews are considered to be nonrespondents. Refer to the supplement overview attachment in the technical documentation for the specific questions deemed critical by the sponsor as necessary to answer in order to be considered a sufficient partial interview.

As a result of sufficient partial interviews being considered responses, individual items/questions have their own response and refusal rates. As part of the nonsampling error analysis, the item response rates, item refusal rates, and edits are reviewed. For the TUS, unweighted item refusal rates range from 0.0 percent to 24.7 percent for September 2022, 0.0 percent to 29.4 percent for January 2023, and 0.0 percent to 33.0 percent for May 2023. The unweighted item nonresponse rates range from 0.1 percent to 27.4 percent for September 2022, 0.0 percent to 32.2 percent for January 2023, and 0.0 percent to 35.8 percent for May 2023. These rates on the high end of the range, however, do not reflect the true quality of the supplement data. The rates include a small number of "intentional flag" variables, which are derived from questions that direct the questionnaire flow for a small portion of the supplement universe (e.g., those who ONLY used a non-cigarette tobacco product one or two times) and a few other types of follow-up or unit variables. Using the September 2022 data as an example, a conservative analysis among ALL items (including these special purpose items) yields the following distribution for the unweighted item nonresponse rates: 0.0 percent at the 10th and 25th percentiles, 1.2 percent at the 50th percentile (median), 3.3 percent at the 75th percentile, and 7.4 percent at the 90th percentile.

<u>Undercoverage</u>. The concept of coverage with a survey sampling process is defined as the extent to which the total population that could be selected for sample "covers" the survey's target population. Missed housing units and missed people within sample households create undercoverage in the CPS. Overall CPS undercoverage for September 2022, January 2023, and May 2023 is estimated to be about ten percent. CPS coverage varies with age, sex, and race. Generally, coverage is higher for females than for males and higher for non-Blacks than for Blacks. This differential coverage is a general problem for most household-based surveys.

The CPS weighting procedure mitigates bias from undercoverage, but biases may still be present when people who are missed by the survey differ from those interviewed in ways other than age, race, sex, Hispanic origin, and state of residence. How this weighting procedure affects other variables in the survey is not precisely known. All of these considerations affect comparisons across different surveys or data sources.

A common measure of survey coverage is the coverage ratio, calculated as the estimated population before poststratification divided by the independent population control. Tables 4 through 6 show CPS coverage ratios by age and sex for certain race and Hispanic groups for September 2022, January 2023, and May 2023. The CPS coverage ratios can exhibit some variability from month to month.

Table 4. Current Population Survey Coverage Ratios: September 2022

	<u>Total</u>		White alone		Black alone		Residual race <sup>A</sup>		<u>Hispanic<sup>B</sup></u>		
Age group	All people	Male	Female	Male	Female	Male	Female	Male	Female	Male	Female

<u>Comparability of Data</u>. Data obtained from the CPS and other sources are not entirely comparable. This is due to differences in interviewer training and experience and in differing survey processes.<sup>7</sup> These differences are examples of nonsampling variability not reflected in the standard errors. Therefore, caution should be used when comparing results from different sources.

Data users should be careful when comparing the data from this microdata file, which reflects 2020 Census-based controls<sup>8</sup>, with microdata files which reflect 2010 Census-based controls. Ideally, the same population controls should be used when comparing any estimates. In reality, the use of the same population controls is not practical when comparing trend data over a period of 10 to 20 years. Thus, when it is necessary to combine or compare data based on different controls or different designs, data users should be aware that changes in weighting controls or weighting procedures can create small differences between estimates. The discussion following includes information on comparing estimates derived from different populations or different sample designs.

Microdata files from previous years reflect the latest available census-based controls. Although the most recent change in population controls had relatively little impact on summary measures such as averages, medians, and percentage distributions, it did have a significant impact on levels. For example, use of 2020 Census-based controls results in about a 0.7 percent increase from the 2010 Census-based controls in the civilian noninstitutionalized population. Thus, estimates of levels for data collected in 2012 and

•

A The Residual race group includes cases indicating a single race other than White or Black, and cases indicating two or more races.

B Hispanics may be any race.

Survey processes include, but are not limited to, question wording, universe, sampling frame, interview modes, and weighting.

<sup>&</sup>lt;sup>8</sup> Refer to Footnote 6.

later years will differ from those for earlier years by more than what could be attributed to actual changes in the population. These differences could be disproportionately greater for certain population subgroups than for the total population.

Users should also exercise caution because of changes caused by the phase-in of the 2010 Census files (refer to "Basic CPS"). During this time period, CPS data were collected from sample designs based on different censuses. Two features of the new CPS design have the potential of affecting estimates: (1) the temporary disruption of the rotation pattern from August 2014 through June 2015 for a comparatively small portion of the sample and (2) the change in sample areas. Most of the known effect on estimates during and after the sample redesign will be the result of changing from 2000 to 2010 geographic definitions. Research has shown that the national-level estimates of the metropolitan and nonmetropolitan populations should not change appreciably because of the new sample design. However, users should still exercise caution when comparing metropolitan and nonmetropolitan estimates across years with a design change, especially at the state level.

Caution should also be used when comparing Hispanic estimates over time. No independent population control totals for people of Hispanic origin were used before 1985.

A Nonsampling Error Warning. Since the full extent of the nonsampling error is unknown, one should be particularly careful when interpreting results based on small differences between estimates. The Census Bureau recommends that data users incorporate information about nonsampling errors into their analyses, as nonsampling error could impact the conclusions drawn from the results. Caution should also be used when interpreting results based on a relatively small number of cases. Summary measures (such as medians and percentage distributions) probably do not reveal useful information when computed on a subpopulation smaller than 75,000.

For additional information on nonsampling error, including the possible impact on CPS data, when known, refer to U.S. Census Bureau (2019) and Brooks & Bailar (1978).

Standard Errors and Their Use. A sample estimate and its standard error enable one to construct a confidence interval. A confidence interval is a range about a given estimate that has a specified probability of containing the average result of all possible samples. For example, if all possible samples were surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.645 standard errors below the estimate to 1.645 standard errors above the estimate would include the average result of all possible samples.

A particular confidence interval may or may not contain the average estimate derived from all possible samples, but one can say with the specified confidence that the interval includes the average estimate calculated from all possible samples.

<sup>&</sup>lt;sup>9</sup> The phase-in process using the 2010 Census files began April 2014.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypothesis is that the population parameters are different. An example of this would be comparing the percentage of men who were part-time workers to the percentage of women who were part-time workers.

Tests may be performed at various levels of significance. A significance level is the probability of concluding that the characteristics are different when, in fact, they are the same. For example, to conclude that two characteristics are different at the 0.10 level of significance, the absolute value of the estimated difference between characteristics must be greater than or equal to 1.645 times the standard error of the difference.

The Census Bureau uses 90-percent confidence intervals and 0.10 levels of significance to determine statistical validity. Consult standard statistical textbooks for alternative criteria.

<u>Estimating Standard Errors</u>. The Census Bureau uses replication methods to estimate the standard errors of CPS and Tobacco Use estimates. These methods primarily measure the magnitude of sampling error. However, they do measure some effects of nonsampling error as well. They do not measure systematic biases in the data associated with nonsampling error. Bias is the average over all possible samples of the differences between the sample estimates and the true value.

There are two ways to calculate standard errors for the CPS microdata file on Tobacco Use.

- 1. Direct estimates created from replicate weighting methods;
- 2. Generalized variance estimates created from generalized variance function (GVF) parameters *a* and *b*.

While replicate weighting methods provide the most accurate variance estimates, this approach requires more computing resources and more expertise on the part of the user. The GVF parameters provide a method of balancing accuracy with resource usage as well as a smoothing effect on standard error estimates. For more information on calculating direct estimates, visit the "Replicate Weighting" section and refer to U.S. Census Bureau (2012) and/or U.S. Census Bureau (2018). For more information on GVF estimates, refer to the "Generalized Variance Parameters" section.

**Replicate Weighting**. The Census Bureau is releasing public use replicate weight files for the September 2022, January 2023, and May 2023 TUS that can be matched to the public use survey data files.

Replicate estimates are created using each of the 160 weights independently to create 160 replicate estimates. For point estimates, multiply the replicate weights by the item of interest at the record level (either an indicator variable to determine the number of people with a characteristic or a variable that contains some value) and tally the weighted values to create the 160 replicate estimates. Use these replicate estimates in formula (1) below to

calculate the total variance for the item of interest. For example, say that the item of interest is the number of males. Tally the weights for all the records that indicated male to create the 160 replicate estimates of the number of males. Then use these estimates in the formula to calculate the total variance for the number of males.

Calculate variance estimates for the estimates using:

$$var(\hat{\theta}_0) = \frac{4}{160} \sum_{i=1}^{160} (\hat{\theta}_i - \hat{\theta}_0)^2$$
 (1)

where  $\hat{\theta}_0$  is the estimate of the statistic of interest, such as a point estimate or proportion, using the weight for the full sample, and  $\hat{\theta}_i$  are the replicate estimates of the same statistic using the replicate weights.

For more information on using replicate weights and calculating direct estimates, refer to U.S. Census Bureau (2012) and/or U.S. Census Bureau (2018).

Generalized Variance Parameters. While it is possible to estimate the standard error based on the survey data for each estimate in a report, there are a number of reasons why this is not done. A presentation of the individual standard errors would be of limited use, since one could not possibly predict all of the combinations of results that may be of interest to data users. Additionally, data users have access to CPS microdata files, and it is impossible to compute in advance the standard error for every estimate one might obtain from those data sets. Moreover, variance estimates are based on sample data and have variances of their own. Therefore, some methods of stabilizing these estimates of variance, for example, by generalizing or averaging over time, may be used to improve their reliability.

Experience has shown that certain groups of estimates have similar relationships between their variances and expected values. Modeling or generalizing may provide more stable variance estimates by taking advantage of these similarities. The GVF is a simple model that expresses the variance as a function of the expected value of the survey estimate. The parameters of the GVF are estimated using direct replicate variances. These GVF parameters provide a relatively easy method to obtain approximate standard errors for numerous characteristics.

In this source and accuracy statement:

- Tables 8 through 20 provide illustrations for calculating standard errors;
- Tables 21 and 22 provide the GVF parameters for the supplement specific estimates; and
- Tables 23 and 24 provide the factors and populations for computation by state and region.

The basic CPS questionnaire records the race and ethnicity of each respondent. With respect to race, a respondent can be White, Black, Asian, American Indian and Alaskan

Native (AIAN), Native Hawaiian and Other Pacific Islander (NHOPI), or combinations of two or more of the preceding. A respondent's ethnicity can be Hispanic or non-Hispanic, regardless of race.

The GVF parameters to use in computing standard errors are dependent upon the race/ethnicity group of interest. Table 7 summarizes the relationship between the race/ethnicity group of interest and the GVF parameters to use in standard error calculations.

**Table 7. Estimation Groups of Interest and Generalized Variance Parameters** 

Race/ethnicity group of interest	Generalized variance parameters to use in standard error calculations	
Total population	Total	
White alone, White alone or in combination (AOIC), or White non-Hispanic population	White	
Black alone, Black AOIC, or Black non-Hispanic population	Black	
Asian alone, Asian AOIC, or Asian non-Hispanic population	Asian, American Indian and Alaska Native (AIAN), Native Hawaiian and Other Pacific Islander (NHOPI)	
AIAN alone, AIAN AOIC, or AIAN non-Hispanic population	Asian, AIAN, NHOPI	
NHOPI alone, NHOPI AOIC, or NHOPI non-Hispanic population	Asian, AIAN, NHOPI	
Populations from other race groups	Asian, AIAN, NHOPI	
Hispanic <sup>A</sup> population	Hispanic <sup>A</sup>	
Two or more races <sup>B</sup> – employment/unemployment and educational attainment characteristics	Black	
Two or more races <sup>B</sup> – all other characteristics	Asian, AIAN, NHOPI	

Source: U.S. Census Bureau, Current Population Survey, Tobacco Use, internal data files.

When calculating standard errors for an estimate of interest from cross-tabulations involving different characteristics, use the set of GVF parameters for the characteristic that will give the largest standard error. If the estimate of interest is strictly from basic CPS data, information and parameters for calculations can be found under "Reliability of estimates from the CPS" at Bureau of Labor Statistics (2022). If the estimate of interest is from the TUS, the GVF parameters will come from Table 21 for nonresponse and Table 22 for self-response. Tables 21 and 22 also provide specific GVF parameters for use with combined 2-months and 3-months of data.

**Standard Errors of Estimated Numbers**. The approximate standard error,  $s_x$ , of an estimated number from this microdata file can be obtained by using the formula:

A Hispanics may be any race.

<sup>&</sup>lt;sup>B</sup> Two or more races refers to the group of cases self-classified as having two or more races.

$$s_x = \sqrt{ax^2 + bx} \tag{2}$$

Here *x* is the size of the estimate, and *a* and *b* are the parameters in Table 8 associated with the particular type of characteristic.

## Illustration 1

Suppose there were 16,910,000 everyday smokers aged 18 and up in May 2023. Table 8 shows how to use the appropriate parameters from Table 20 and Formula (2) to estimate the standard error and confidence interval.

Table 8. Illustration of Standard Errors of Estimated Numbers

Number of everyday smokers (x)	16,910,000
a-parameter (a)	-0.000024
b-parameter (b)	6,402
Standard error	318,000
90-percent confidence interval	16,390,000 to 17,430,000

Source: U.S. Census Bureau, Current Population Survey, Tobacco Use, May 2023.

The standard error is calculated as

$$s_x = \sqrt{-0.000024 \times 16,910,000^2 + 6,402 \times 16,910,000}$$

which, rounded to the nearest thousand, is 318,000. The 90-percent confidence interval is calculated as  $16,910,000 \pm 1.645 \times 318,000$ .

A conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples.

**Standard Errors of Estimated Percentages**. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends on both the size of the percentage and its base. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the parameter from Table 21 or 22 as indicated by the numerator.

The approximate standard error,  $s_{y,p}$ , of an estimated percentage can be obtained by using the formula:

$$s_{y,p} = \sqrt{\frac{b}{y}p(100 - p)} \tag{3}$$

Here *y* is the total number of people, families, households, or unrelated individuals in the base or denominator of the percentage, *p* is the percentage 100\*x/y ( $0 \le p \le 100$ ), and *b* is

the parameter in Table 21 or 22 associated with the characteristic in the numerator of the percentage.

#### Illustration 2

Suppose there were 80,820,000<sup>10</sup> people aged 45 to 64 in May 2023, of which 9.2 percent were every-day smokers. Table 9 shows how to use the appropriate parameter from Table 21 and Formula (3) to estimate the standard error and confidence interval.

Table 9. Illustration of Standard Errors of Estimated Percentages

14510 71 11145 61 44 61 61 61 61 61 61 61 61 61 61 61 61 61				
Percentage of people aged 45-64 who were everyday smokers (p)	9.2			
Base (y)	80,820,000			
b-parameter (b)	6,402			
Standard error	0.26			
90-percent confidence interval	8.8 to 9.6			

Source: U.S. Census Bureau, Current Population Survey, Tobacco Use, May 2023.

The standard error is calculated as

$$s_{y,p} = \sqrt{\frac{6,402}{80,820,000} \times 9.2 \times (100.0 - 9.2)} = 0.26$$

The 90-percent confidence interval for the estimated percentage of people aged 45 to 64 who are everyday smokers is calculated as  $9.2 \pm 1.645 \times 0.26$ .

#### Illustration 3

Of all adults (ages 18 and up) in May 2023, suppose the number of former smokers was 40,060,000 and the number of ever (current and former) smokers was 62,020,000<sup>11</sup>. The percentage of former smokers out of ever smokers (known as the "quit ratio") would be 64.6 percent. Table 10 shows how to use the appropriate parameter from Table 21 and Formula (3) to estimate the standard error and confidence interval.

Some respondents who gave an age in the 45-64 range did not respond to question PEA3 ("do you now smoke cigarettes every day, some days, or not at all?"). As a result, using the estimate (81,420,000) from PRTAGE=45-64 as a base would result in the estimated percentage of 45-64 year olds who were every-day smokers, some-day smokers, and former smokers summing to less than 100 percent of 45-64 year olds. Accordingly, we have used the weights of the PRTAGE=45-64 respondents who also responded to PEA3 as the base in this estimate, even though the sum of the weights of the PRTAGE=45-64 respondents is our actual estimate of the number of persons in the 45-64 age range.

Some persons who responded in the affirmative to question PEA1 ("have you smoked at least 100 cigarettes in your entire life?") did not respond to question PEA3 ("do you now smoke cigarettes every day, some days, or not at all?"). As a result, using the estimate (62,440,000) from PEA1 as a base would result in the estimated percentages of every-day smokers, some-day smokers, and former smokers summing to less than 100 percent of the persons who had ever smoked. Accordingly, we have used the weighted responses to PEA3 as the base in this estimate, even though the estimate from PEA1 is our actual estimate of the number of ever smokers.

An alternative to using PEA3 is to use SMOKSTAT. SMOKSTAT = 2-4 represents "Ever" smokers. The base number for "Ever smokers" using SMOKSTAT is the same as the number obtained from using PEA3.

Table 10. Second Illustration of Standard Errors of Estimated Percentages

	0
Percentage of adult ever smokers who don't smoke anymore (p)	64.6
Base (y)	62,020,000
b-parameter (b)	6,402
Standard error	0.49
90-percent confidence interval	63.8 to 65.4

Source: U.S. Census Bureau, Current Population Survey, Tobacco Use, May 2023.

The standard error is calculated as

$$s_{y,p} = \sqrt{\frac{6,402}{62,020,000} \times 64.6 \times (100.0 - 64.6)} = 0.49$$

and the 90-percent confidence interval is calculated as  $64.6 \pm 1.645 \times 0.49$ .

**Standard Errors of Estimated Differences**. The standard error of the difference between two sample estimates is approximately equal to

$$s_{|x_1-x_2|} = \sqrt{(s_{x_1})^2 + (s_{x_2})^2}$$
 (4)

where  $s_{x_1}$  and  $s_{x_2}$  are the standard errors of the estimates,  $s_1$  and  $s_2$ . The estimates can be numbers, percentages, ratios, etc. This will result in accurate estimates of the standard error of the same characteristic in two different areas or for the difference between separate and uncorrelated characteristics in the same area. However, if there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

#### Illustration 4

In May 2023, suppose that for self-respondents, of the 10,580,000 non-Hispanic Blacks 18 to 34 years of age, 3.6 percent were every-day smokers, and of the 39,210,000 non-Hispanic Whites 18 to 34 years of age, 4.7 percent were every-day smokers. Table 11 shows how to use the appropriate parameters from Table 22, since the data is from self-respondents, and Formulas (3) and (4) to estimate the standard error and confidence interval.

**Table 11. Illustration of Standard Errors of Estimated Differences** 

	Non-Hispanic Black (x1)	Non-Hispanic White ( <i>x</i> <sub>2</sub> )	Difference
Percentage of people who were everyday smokers (p)	3.6	4.7	1.1
Base (y)	10,580,000	39,210,000	-
b-parameter (b)	11,194	8,502	-
Standard error	0.61	0.31	0.68
90-percent confidence interval	2.6 to 4.6	4.2 to 5.2	0.0 to 2.2

Source: U.S. Census Bureau, Current Population Survey, Tobacco Use, May 2023.

The standard error of the difference is calculated as

$$s_{|x_1 - x_2|} = \sqrt{0.61^2 + 0.31^2} = 0.68$$

and the 90-percent confidence interval around the difference is calculated as  $1.1 \pm 1.645 \times 0.68$ . Since this interval includes zero, we can conclude with 90-percent confidence that the percentage of non-Hispanic Black every-day smokers between 18 and 34 years of age is not significantly different than the percentage of non-Hispanic White every-day smokers between 18 and 34 years of age.

**Standard Errors of Estimated Ratios**. Certain estimates may be calculated as the ratio of two numbers. Compute the standard error of a ratio, x/y, using

$$s_{x/y} = \frac{x}{y} \sqrt{\left(\frac{s_x}{x}\right)^2 + \left(\frac{s_y}{y}\right)^2 - 2r\frac{s_x s_y}{xy}} \tag{5}$$

The standard error of the numerator,  $s_x$ , and that of the denominator,  $s_y$ , may be calculated using formulas described earlier. In Formula (5), r represents the correlation between the numerator and the denominator of the estimate.

For one type of ratio, the denominator is a count of families or households, and the numerator is a count of people in those families or households with a certain characteristic. If there is at least one person with the characteristic in every family or household, use 0.7 as an estimate of r. An example of this type is the average number of children per family with children.

For another type of ratio, the population estimated by the numerator (x) is a subset of the population estimated by the denominator (y). In that case,

$$r = \frac{x \times s_y}{y \times s_x} \tag{6}$$

For all other types of ratios, r is assumed to be zero. Examples are the average number of children per family and the family poverty rate. If r is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the standard error of the ratio. NOTE: For estimates expressed as the ratio of x per 100 y or x per 1,000 y, multiply Formula (5) by 100 or 1,000, respectively, to obtain the standard error.

### Illustration 5

In May 2023, suppose the number of adults who were self-reported as every-day smokers was  $17,000,000^{12}$  and the number of adults who were self-reported as some-day smokers was  $4,436,000^{13}$ . The ratio of every-day smokers to some-day smokers would be 3.8. Table 12 shows how to use Formulas (2) and (5) and the appropriate parameters from Table 22, since the data is from self-respondents, with r = 0 to estimate the standard error and confidence interval.

**Table 12. Illustration of Standard Errors of Estimated Ratios** 

	Every-day (x)	Some-day (y)	Ratio
Number of smokers	17,000,000	4,436,000	3.8
a-parameter (a)	-0.000038	-0.000038	-
b-parameter (b)	10,017	10,017	-
Standard error	399,000	209,000	0.20
90-percent confidence interval	16,340,000 to 17,660,000	4,092,000 to 4,780,000	3.5 to 4.1

Source: U.S. Census Bureau, Current Population Survey, Tobacco Use, May 2023.

The standard error of the ratio is calculated as

$$s_{x/y} = \frac{17,000,000}{4,436,000} \sqrt{\left(\frac{399,000}{17,000,000}\right)^2 + \left(\frac{209,000}{4,436,000}\right)^2} = 0.20$$

and the 90-percent confidence interval is calculated as  $3.8 \pm 1.645 \times 0.20$ .

<u>Accuracy of State Estimates</u>. The redesign of the CPS following the 1980 census provided an opportunity to increase efficiency and accuracy of state data. All strata are now defined within state boundaries. The sample is allocated among the states to produce state and national estimates with the required accuracy while keeping total sample size to a minimum. Improved accuracy of state data was achieved with about the same sample size as in the 1970 design.

Since the CPS is designed to produce both state and national estimates, the proportion of the total population sampled, and the sampling rates differ among the states. In general, the smaller the population of the state, the larger the sampling proportion. For example, in

Computed in the same manner as in Illustration 8a to preserve consistency of estimates throughout this Source and Accuracy Statement. Refer to footnote 14 to Illustration 8a.

Computed in the same manner as in Illustration 8b to preserve consistency of estimates throughout this Source and Accuracy Statement. Refer to footnote 15 to Illustration 8b.

Vermont, approximately 1 in every 250 households is sampled each month. In New York, the sample is about 1 in every 2,000 households. Nevertheless, the size of the sample in New York is four times larger than in Vermont because New York has a larger population.

**Standard Errors of State Estimates**. The standard error for a state may be obtained by determining new state-level a- and b-parameters and then using these adjusted parameters in the standard error formulas mentioned previously. To determine a new state-level b-parameter ( $b_{state}$ ), multiply the b-parameter from Table 21 or 22 by the state factor from Table 23. To determine a new state-level a-parameter ( $a_{state}$ ), use the following:

- (1) If the a-parameter from Table 21 or 22 is positive, multiply the a-parameter by the state factor from Table 24.
- (2) If the a-parameter in Table 21 or 22 is negative, calculate the new state-level a-parameter as follows:

$$a_{state} = \frac{-b_{state}}{POP_{state}} \tag{7}$$

where *POP*<sub>state</sub> is the state population found in Table 23.

## Illustration 6

Suppose there were 998,000 adults living in Florida in May 2023 who were every-day smokers. Table 13 shows how to use the appropriate parameters, factor, and population from Tables 21 and 23 and Formulas (2) and (7) to estimate the standard error and confidence interval.

**Table 13. Illustration of Standard Errors of State Estimates** 

Number of every-day smokers in Florida (x)	998,000
b-parameter (b)	6,402
Florida state factor	1.12
State population	21,787,388
State a-parameter ( $a_{state}$ )	-0.000329
State b-parameter ( $b_{state}$ )	7,170
Standard error	83,000
90-percent confidence interval	861,000 to 1,135,000

Source: U.S. Census Bureau, Current Population Survey, Tobacco Use, May 2023.

Obtain the state-level b-parameter by multiplying the b-parameter, 6,402, by the state factor, 1.12. This gives  $b_{state} = 6,402 \times 1.12 = 7,170$ . Obtain the needed state-level aparameter by

$$a_{state} = \frac{-7,170}{21,787,388} = -0.000329$$

The standard error of the estimate of the number of adults in Florida who were every-day smokers can then be found by using Formula (2) and the new state-level a- and b-parameters, -0.000329 and 7,170, respectively. The standard error is given by

$$s_x = \sqrt{-0.000329 \times 998,000^2 + 7,170 \times 998,000},$$

which, rounded to the nearest thousand, is 83,000. The 90-percent confidence interval is calculated as  $998,000 \pm 1.645 \times 83,000$ .

**Standard Errors of Regional Estimates**. To compute standard errors for regional estimates, follow the steps for computing standard errors for state estimates found in "Standard Errors of State Estimates" using the regional factors and populations found in Table 24.

<u>Standard Errors of Groups of States</u>. The standard error calculation for a group of states is similar to the standard error calculation for a single state. First, calculate a new state group factor for the group of states. Then, determine new state group a- and b-parameters. Finally, use these adjusted parameters in the standard error formulas mentioned previously.

Use the following formula to determine a new state group factor:

$$state\ group\ factor = \frac{\sum_{i=1}^{n} POP_{i} \times state\ factor_{i}}{\sum_{i=1}^{n} POP_{i}}$$
(8)

where  $POP_i$  and  $factor_i$  are the population and factor for state i from Table 23. To obtain a new state group b-parameter ( $b_{state\ group}$ ), multiply the b-parameter from Table 21 or 22 by the state group factor obtained by Formula (8). To determine a new state group a-parameter ( $a_{state\ group}$ ), use the following:

- (1) If the a-parameter from Table 21 or 22 is positive, multiply the a-parameter by the state group factor determined by Formula (8).
- (2) If the a-parameter in Table 21 or 22 is negative, calculate the new state group aparameter as follows:

$$a_{state\,group} = \frac{-b_{state\,group}}{\sum_{i=1}^{n} POP_i} \tag{9}$$

#### Illustration 7

Suppose the state group factor for the state group Illinois-Indiana-Michigan was required for May 2023. Use Formula (9) and the appropriate factors and populations from Table 23 to get

$$state\ group\ factor = \frac{12,350,133\times1.16+6,767,694\times1.14+9,931,623\times1.15}{12,350,133+6,767,694+9,931,623} = 1.15$$

**Standard Errors of Averages for Grouped Data**. The formula used to estimate the standard error of an average for grouped data is

$$s_{\bar{x}} = \sqrt{\frac{b}{y}(S^2)} \tag{10}$$

In this formula, y is the size of the base of the distribution and b is the parameter from Table 21 or 22. The variance,  $S^2$ , is given by the following formula:

$$S^2 = \sum_{i=1}^c p_i \bar{x}_i^2 - \bar{x}^2 \tag{11}$$

where  $\bar{x}$ , the average of the distribution, is estimated by

$$\bar{x} = \sum_{i=1}^{c} p_i \bar{x}_i \tag{12}$$

and

- c = the number of groups; *i* indicates a specific group, thus taking on values 1 through *c*.
- $p_i$  = estimated proportion of people, families, households, or unrelated individuals whose values, for the characteristic (x-values) being considered, fall in group i.
- $\overline{x}_i = (L_i + U_i)/2$  where  $L_i$  and  $U_i$  are the lower and upper interval boundaries, respectively, for group i.  $\overline{x}_i$  is assumed to be the most representative value for the characteristic for people, families, households, or unrelated individuals in group i. If group c is open-ended, i.e., no upper interval boundary exists, use a group approximate average value of

$$\bar{x}_c = \frac{3}{2}L_c \tag{13}$$

NOTES: 1) For continuous data, i.e., income, time, etc., the upper bound of the *i*th interval and lower bound of the next interval are essentially the same. 2) Estimates for number of cigarettes smoked 'per some day' (as in Illustration 8b) must first be converted into estimates for number of cigarettes smoked 'per day' by multiplying by the average number of days smoked in the last 30 days, and dividing by 30 for each group *i*.

#### Illustration 8a

Suppose there were  $17,000,000^{14}$  adult every-day smokers among self-respondents in May 2023. Table 14 shows the distribution of the average number of cigarettes consumed per day.

Table 14. Distribution of the Average Number of Cigarettes Consumed Per Day

Cigarettes per day	Percent of smokers	$\overline{x}_i$
1 - 10	51.2	(1+10)/2 = 5.5
11 – 20	40.9	(11+20)/2 = 15.5
21+	7.9	3/2(31)= 31.5

Source: U.S. Census Bureau, Current Population Survey, Tobacco Use, May 2023.

Using Formula (12),

$$\bar{x} = (0.512 \times 5.5) + (0.409 \times 15.5) + (0.079 \times 31.5) = 11.64$$

and Formula (11),

$$S^2 = (0.512 \times 5.5^2) + (0.409 \times 15.5^2) + (0.079 \times 31.5^2) - 11.64^2 = 56.65$$

Because this data is from self-respondents, use the appropriate parameter from Table 22 and Formula (10) to get

Table 15. Illustration of Standard Errors of Averages for Grouped Data

Average amount of cigarettes smoked per day for every-day smokers $(\bar{x})$	11.64
Variance (S <sup>2</sup> )	56.65
Base (y)	17,000,000
b-parameter (b)	10,017
Standard error	0.183
90-percent confidence interval	11.34 to 11.94

Source: U.S. Census Bureau, Current Population Survey, Tobacco Use, May 2023.

The standard error is calculated as

$$s_{\bar{x}} = \sqrt{\frac{10,017}{17,000,000}(56.65)} = 0.183$$

Some persons who responded as every-day smokers to question PEA3 ("Do you now smoke cigarettes every day, some days, or not at all?") did not respond to PTB1 ("On the average, about how many cigarettes do you now smoke each day?") with answers greater than zero. As a result, using the estimate (17,320,000) from PEA3 as a base would result in the estimated percentages of every-day smokers who smoke 1-10, 11-20, 21-30, and 31or more cigarettes per day summing to well under 100 percent. Accordingly, we have used the weighted self-responses of those who answered both PTB1 with answers greater than zero as the base in this estimate, even though the estimate from PEA3 is our actual estimate of the number of every-day smokers.

and the 90-percent confidence interval is calculated as  $11.64 \pm 1.645 \times 0.183$ .

A conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples.

## **Illustration 8b**

Suppose there were 4,436,000<sup>15</sup> adult some-day smokers among self-respondents in May 2023. Table 16 shows the distribution of the average number of cigarettes consumed per some day and per every day.

Table 16. Distribution of the Average Number of Cigarettes Consumed Per Some Day and Per Every Day

Cigarettes per some day	Percent of smokers	$\overline{x}_i$	Average number of days smoked in the last 30 days $(d_i)$	Cigarettes per day $(\overline{x}_i \times d_i / 30)$
1	16.2	(1+1)/2 = 1.0	9.6	1.0*9.6/30 = 0.32
2	23.4	(2+2)/2 = 2.0	10.9	2.0*10.9/30 = 0.73
3	14.9	(3+3)/2 = 3.0	14.4	3.0*14.4/30 = 1.44
4	9.6	(4+4)/2 = 4.0	14.9	4.0*14.9/30 = 1.99
5+	35.9	3/2(5) = 7.5	16.5	7.5*16.5/30 = 4.13

Source: U.S. Census Bureau, Current Population Survey, Tobacco Use, May 2023.

Using Formula (12),

$$\bar{x} = (0.162 \times 0.32) + (0.234 \times 0.73) + (0.149 \times 1.44) + (0.096 \times 1.99) + (0.359 \times 4.13)$$
  
= 2.11

and Formula (11),

$$S^2 = (0.162 \times 0.32^2) + (0.234 \times 0.73^2) + (0.149 \times 1.44^2) + (0.096 \times 1.99^2) + (0.359 \times 4.13^2) - 2.11^2 = 2.50$$

Because this data is from self-respondents, use the appropriate parameter from Table 22 and Formula (10) to get

Some persons who responded as some-day smokers to question PEA3 ("Do you now smoke cigarettes every day, some days, or not at all?") did not respond to both PEC1 ("On how many of the past 30 days did you smoke cigarettes?") and PTC1a (On the average, on those days, how many cigarettes did you usually smoke each day?) with answers greater than zero. As a result, using the estimate (5,148,000) from PEA3 as a base would result in the estimated percentages of smokers who smoke 1, 2, 3, 4, and 5 or more cigarettes per some day summing to well under 100 percent. Accordingly, we have used the weighted self-responses of those who answered both PEC1 and PTC1a with answers greater than zero as the base in this estimate, even though the estimate from PEA3 is our actual estimate of the number of some-day smokers.

Table 17. Second Illustration of Standard Errors of Averages for Grouped Data

Average amount of cigarettes smoked per day for some-day smokers $(\bar{x})$	2.11
Variance (S <sup>2</sup> )	2.50
Base (y)	4,436,000
b-parameter (b)	10,017
Standard error	0.075
90-percent confidence interval	1.99 to 2.23

Source: U.S. Census Bureau, Current Population Survey, Tobacco Use, May 2023.

The standard error is calculated as

$$s_{\bar{x}} = \sqrt{\frac{10,017}{4,436,000}(2.50)} = 0.075$$

and the 90-percent confidence interval is calculated as  $2.11 \pm 1.645 \times 0.075$ .

A conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples.

**Standard Errors of Estimated Aggregates**. Aggregates, such as the total number of cigarettes consumed, are computed by multiplying the average number of cigarettes consumed per smoker,  $\overline{x}$ , by the total number of smokers, y, in the formula

$$T = \bar{x}y \tag{14}$$

where *T* is the aggregate to be computed.

Both  $\overline{x}$  and y have a standard error, so the standard error of a product must be computed. Approximate the standard error of an aggregate with the formula

$$S_T = \sqrt{\bar{x}^2 s_y^2 + y^2 s_{\bar{x}}^2} \tag{15}$$

where  $s_{\overline{x}}$  is computed using Formula (10) and  $s_y$  is computed using Formula (2). In the above formula, the correlation between  $\overline{x}$  and y is assumed to be zero. If it is actually positive (negative), then this formula will underestimate (overestimate) the standard error of the product.

#### Illustration 9

Continuing with Illustration 8a, suppose that the estimate for the total number of every-day smokers was  $17,000,000^{16}$  adults and that they smoked an average of 11.64 cigarettes per

<sup>&</sup>lt;sup>16</sup> Refer to footnote 14 to Illustration 8a.

day. They then would consume approximately 197,900,000 cigarettes per day. Table 18 shows how to use  $s_y$  and  $s_{\bar{x}}$  from Illustrations 5 and 8a, respectively, and Formula (15) to estimate the standard error and confidence interval.

Table 18. Illustration of Standard Errors of Estimated Aggregates

14.010 101114.0414.0110110110114.41 11.010011 11.0104.11.00						
Average amount of cigarettes smoked per day $(\bar{x})$	11.64					
Standard error $(s_{\bar{x}})$	0.183					
Number of every-day smokers (y)	17,000,000					
Standard error (s <sub>y</sub> )	399,000					
Number of cigarettes consumed (T)	197,900,000					
Standard error (s <sub>T</sub> )	5,590,000					
90-percent confidence interval	188,700,000 to 207,100,000					

Source: U.S. Census Bureau, Current Population Survey, Tobacco Use, May 2023.

The aggregate *T* is calculated as

$$T = 11.64 \times 17,000,000 = 197,900,000$$

and the standard error for *T* is calculated as

$$s_T = \sqrt{(11.64^2 \times 399,000^2) + (17,000,000^2 \times 0.183^2)} = 5,590,000$$

The 90-percent confidence interval is calculated as  $197,900,000 \pm 1.645 \times 5,590,000$ .

A conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples.

<u>Standard Errors of Averages for Daily Amount Smoked by Current Smokers</u>. The formula used to estimate the standard error of the average daily amount smoked by current smokers is

$$s_{\bar{x}} = \sqrt{\left[\frac{P(C_1 - C_2)}{(E + P)^2}\right]^2 s_E^2 + \left[\frac{E(C_1 - C_2)}{(E + P)^2}\right]^2 s_P^2 + \left(\frac{E}{E + P}\right)^2 s_{C_1}^2 + \left(\frac{P}{E + P}\right)^2 s_{C_2}^2}$$
(16)

where

E = the estimated population of every-day smokers.

 $s_{E}$  = the standard error of the estimated population of every-day smokers.

DRB Clearance Numbers - CBDRB-FY23-0149/CBDRB-FY23-0391

P = the estimated population of some-day smokers.

 $s_P$  = the standard error of the estimated population of some-day smokers.

 $C_1$  = the average amount an every-day smoker smokes per day.

 $s_{c_1}$  = the standard error of the average amount an every-day smoker smokes per day.

 $C_2$  = the average amount a some-day smoker smokes per day.

 $s_{C_2} =$  the standard error of the average amount a some-day smoker smokes per day.

#### Illustration 10

Continuing with Illustrations 8 and 9, suppose there were 17,00,000<sup>17</sup> every-day smokers that smoked an average of 11.64 cigarettes per day. In addition, suppose that 4,436,000<sup>18</sup> some-day smokers smoked an average of 2.11 cigarettes per day. Table 19 shows the distribution of the average number of cigarettes consumed per day by all current smokers.

Table 19. Distribution of the Average Number of Cigarettes Consumed Per Day by All Current Smokers

Cigarettes per day	Percent of smokers*
0.32	3.4
0.73	4.8
1.44	3.1
1.99	2.0
4.13	7.4
5.5	40.6
15.5	32.4
31.5	6.3

Source: U.S. Census Bureau, Current Population Survey, Tobacco Use, May 2023.

where  $\overline{x}$  , the average amount smoked by all current smokers, is found using Formula (12) as

$$\bar{x} = (0.034 \times 0.32) + (0.048 \times 0.73) + (0.031 \times 1.44) + (0.020 \times 1.99) + (0.074 \times 4.13) + (0.406 \times 5.5) + (0.324 \times 15.5) + (0.063 \times 31.5) = 9.68$$

<sup>\*</sup> Estimates do not sum to 100 percent due to rounding.

<sup>&</sup>lt;sup>17</sup> Refer to footnote 14 to Illustration 8a.

<sup>&</sup>lt;sup>18</sup> Refer to footnote 15 to Illustration 8b.

Use the appropriate parameters from Table 22, since this is self-respondent data,  $s_E$  and  $s_P$  from Illustration 5, and  $s_{C_1}$  and  $s_{C_2}$  from Illustration 8, and Formula (16) to get

Table 20. Illustration of Standard Errors of Averages for Daily Amount Smoked by Current Smokers

	1
Average amount of cigarettes smoked per day $(\bar{x})$	9.68
Estimated population of every-day smokers (E)	17,000,000
Standard error ( $S_E$ )	399,000
Estimated population of some-day smokers ( <i>P</i> )	4,436,000
Standard error ( $s_P$ )	209,000
Average amount of cigarettes smoked per day by every-day smokers ( $C_1$ )	11.64
Standard error ( $s_{c_1}$ )	0.183
Average amount of cigarettes smoked per day by some-day smokers ( $C_2$ )	2.11
Standard error ( $s_{C_2}$ )	0.075
Standard error	0.168
90-percent confidence interval	9.40 to 9.96

Source: U.S. Census Bureau, Current Population Survey, Tobacco Use, May 2023.

The standard error for  $\overline{x}$  is calculated as

$$s_{\bar{x}} = \left[ \left( \frac{4,436,000 (11.64 - 2.11)}{(17,000,000 + 4,436,000)^2} \right)^2 \times 399,000^2 + \left( \frac{17,000,000 (11.64 - 2.11)}{(17,000,000 + 4,436,000)^2} \right)^2 \times 209,000^2 + \left( \frac{17,000,000}{17,000,000 + 4,436,000} \right)^2 \times 0.183^2 + \left( \frac{4,436,000}{17,000,000 + 4,436,000} \right)^2 \times 0.075^2 \right]^{\frac{1}{2}} = 0.168$$

The 90-percent confidence interval is calculated as  $9.68 \pm 1.645 \times 0.168$ .

A conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples.

<u>Standard Errors of Quarterly or Yearly Averages</u>. For information on calculating standard errors for labor force data from the CPS which involve quarterly or yearly averages, please reference Bureau of Labor Statistics (2006).

<u>Technical Assistance</u>. If you require assistance or additional information, please contact the Demographic Statistical Methods Division via e-mail at <u>dsmd.source.and.accuracy@census.gov</u>.

Source: U.S. Census Bureau, Current Population Survey, External data from the Tobacco Use Supplement, September 2022, January 2023, and May 2023.

Notes: These parameters are to be applied to the Tobacco Use Supplement data. The White, Black, and Asian, AIAN, NHOPI parameters are to be used for both alone and in combination race group estimates. For the group self-classified as having two or more races, use the Asian, AIAN, NHOPI parameters for all characteristics except employment, unemployment, and educational attainment, in which case use Black parameters. A more detailed discussion on the use of parameters for race and ethnicity can be found in the "Generalized Variance Parameters" section.

A AIAN is American Indian and Alaska Native, and NHOPI is Native Hawaiian and Other Pacific Islander.

B Hispanics may be any race.
